Methodology

STOXX will exclude companies that are not compliant based on the Sustainalytics Global Standards Screening assessment, have Severe Controversy Rating (Category 5) or are involved in Controversial Weapons. Companies that generate revenues from Tobacco Production and Distribution, Conventional and Unconventional Oil & Gas, Thermal Coal, Military Contracting Weapons or with below 50 ESG scores are not eligible for selection.

Constituents of the EURO STOXX index that meet the aforementioned criteria are ranked in descending order of their free float market capitalization. The index selects the largest 50 securities from this list, subject to ICB Industry constraints. These securities are then ranked in ascending order of their ESG scores and issued linearly increasing weights. Securities with higher ESG scores will have larger weights than those with lower ESG scores.

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

³ Net dividend yield is calculated as net return index return minus price index return
