FACTOR AND STRATEGY

STOXX® GLOBAL 1800 AX LOW RISK INDEX

Index description

STOXX single and multi-factor indices aim to harvest the risk premia of several academically validated style factors - Value, Momentum, Quality, Size and Low Risk. At the same time the rules ensure tradability and diversification as well as limit untargeted systematic exposures.

STOXX uses Axioma's risk model and optimizer to construct the factor indices. The STOXX single and multi-factor indices are based on the respective STOXX country or regional benchmark indices.
Key facts

»Invest in targeted factor exposures with managed liquidity and risk profiles across various regions

»Use of Axioma's factor risk models and portfolio construction expertise to define the factors based on extensive validation from research and having a clear economic rationale

»Factor family consists of 5 single factor indices (Value, Momentum, Quality, Low Risk, and Size) and one multi-factor index

»Same index construction rules applied across the factor family

»Single factor indices maximize the target factor while constraining the exposure to other factors

»Multi-factor index employs a bottom-up approach by maximizing the exposure to an equally weighted aggregated multi-factor score

»Ensures tradability by managing turnover and exposure to illiquid positions

»Ensures diversification using country and industry controls

Descriptive statistics

Index	Market cap (EUR bn.)		Components (EUR bn.)				Component weight (%)		Turnover (%)
	Full	Free-float	Mean	Median	Largest	Smallest	Largest	Smallest	Last 12 months
STOXX Global 1800 Ax Low Risk Index	N/A	104.0	0.7	0.4	6.0	0.0	5.8	0.0	50.0
STOXX Global 1800 Index	54,859.7	49,533.1	27.5	9.8	2,302.3	0.6	4.6	0.0	3.1

Supersector weighting (top 10)

15.2% Technology
12.0% Industrial Goods & Services
11.1% Financial Services
9.5% Food, Beverage & Tobacco
9.5% Health Care
7.6% Travel & Leisure
7.5% Telecommunications
7.3% Banks
5.2% Consumer Products & Services
3.6% Chemicals

Country weighting

61.1% United States
7.3% Canada
6.1% France
5.2% Great Britain
5.1% Singapore
4.9% Switzerland
3.8% Australia
3.6% Japan
2.3% Germany
0.4% Netherlands

Risk and return figures[1]

Index returns						Return (%)				Annualized return (%)
	Last month	YTD	1Y	3Y	5Y	Last month	YTD	1Y	3Y	5Y
STOXX Global 1800 Ax Low Risk Index	1.6	4.1	-1.3	38.6	67.4	N/A	N/A	-1.3	11.6	10.9
STOXX Global 1800 Index	0.2	6.0	-0.9	44.0	63.7	N/A	N/A	-0.9	13.1	10.5
Index volatility and risk					Annualized volatility (%)					Annualized Sharpe ratio[2]
STOXX Global 1800 Ax Low Risk Index	10.4	10.6	13.7	12.1	14.4	N/A	N/A	-0.4	0.8	0.7

Methodology

Bringing together the powerful indexing and analytics capabilities of Qontigo, the STOXX Factor Index suite delivers more clarity to the market for factor investors by relying on the institutionally tested analytics of Axioma Factor Risk Models and advanced portfolio construction techniques. The use of Axioma's risk models ensures strong exposure to the respective target factor (Value, Momentum, Quality, Low Risk, Size, Multi-Factor) while allowing for ease of control over unintended exposures. The inclusion of constraints targets benchmark tracking with industry and country controls, and ensures tradability by limiting exposure to less liquid names and turnover while controlling for effective number of names and weights.

BACKTESTED PERFORMANCE
This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION
The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

[3] gr. div. yield is calculated as gr. return index return minus price index return
