

STOXX® AI GLOBAL ARTIFICIAL INTELLIGENCE ADTV5 INDEX

Index description

Artificial intelligence (AI) is the science of creating computer programs and machines that exhibit human-like intelligence and cognitive skills. The STOXX® AI Global Artificial Intelligence ADTV5 Index is comprised of companies from a wide range of industries that invest heavily in the development of new AI technologies. These companies are therefore considered to be well-positioned to benefit from the increased adoption of AI technologies.

STOXX teamed up with an award-winning AI company, Yewno, whose proprietary AI algorithms, which include knowledge graph techniques, are used to identify the index constituents from the universe of the STOXX® Developed and Emerging Markets Total Market Index. The key criterion used in the selection process is patent filings related to AI IP, thereby identifying AI innovators as well as AI adopters.

The ADTV5 version of the index sets the minimum liquidity threshold to EUR 5 million.

Key facts

» Index allows targeted investment in AI, a significant megatrend.

» Unique selection process based on an artificial-intelligence algorithm developed by Yewno Inc. to identify companies which invest heavily in AI technology, i.e. which own a significant amount of AI-related IP.

» Liquidity filters ensure replicability.

STOXX Developed and Emerging Markets Total Market Index	22.7	17.0	16.4	16.1	0.1	1.7	1.4	3.6

Performance and annual returns⁴

Methodology

The parent index of the STOXX® AI Global Artificial Intelligence ADTV5 Index is the STOXX® Developed and Emerging Markets Total Market Index.

Companies are included in the index if they own significant AI-related intellectual property (IP), i.e. if they have been granted a significant number of AI-related patents. A company's AI IP is deemed to be significant if both its AI IP exposure and its AI IP contribution fall within the top 75% of companies (calculated based only on those companies which have AI IP exposure and make an AI IP contribution). AI IP exposure is defined as the percentage of total AI-related patents granted to a company vs. the total number of patents granted to that company over the same period. AI IP contribution is defined as the percentage of total AI-related patents granted to a company vs. the total number of AI-related patents granted globally over the same period.

The remaining companies are then screened for liquidity, only selecting stocks with a 3-month average daily trading value (ADTV) greater than EUR 5 million. The index is equal-weighted.

DISCLAIMER

STOXX, Deutsche Boerse Group (DBAG) and their licensors, research partners or data providers do not make any warranties or representations, express or implied, with respect to the timeliness, sequence, accuracy, completeness, currentness, merchantability, quality or fitness for any particular purpose of its index data and exclude any liability in connection therewith. STOXX, DBAG and their licensors, research partners or data providers are not providing investment advice through the publication of indices or in connection therewith. In particular, the inclusion of a company in an index, its weighting, or the exclusion of a company from an index, does not in any way reflect an opinion of STOXX, DBAG or their licensors, research partners or data providers on the merits of that company. Financial instruments based on the STOXX® indices, DAX® indices or on any other indices supported by STOXX are in no way sponsored, endorsed, sold or promoted by STOXX, DBAG or their licensors, research partners or data providers.

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

³ Net dividend yield is calculated as net return index return minus price index return
