

STOXX® EUROPE 600 MONTHLY HEDGED INDEX

Index description

A currency-hedged index represents returns for global index investment strategies that involve hedging currency risk, but not the underlying constituent risk. Market participants who employ a currency-hedged investment strategy are generally willing to forgo potential currency gains in exchange for a reduction in the risks associated with foreign exchange fluctuations. To achieve this, the index combines the performance of the underlying index (e.g. the STOXX Europe 600 Index) with a hypothetical, rolling investment into one-month foreign exchange forward contracts. By selling foreign exchange forward contracts, global investors are able to lock in current exchange forward rates and manage their currency risk. Profits (losses) from the forward contracts are offset by losses (profits) in the value of the currency, thereby negating exposure to the currency.

Key facts

» Eliminates the risk of currency fluctuations at the cost of potential currency gains

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers a wide range of customization, in terms of component selection, weighting schemes and personalized calculation methodologies.
