ISTOXX INDICES

Index description

The iSTOXX® USA Single & Multi-factor indices offer investors a straightforward and intuitive tool to extract factor risk premia on equities while controlling risks and keeping focus on tradability. The selection and weighting are based on the SunGard APT Risk model, which uses a set of constraints to minimize risk and maximize factor exposure. These indices differ from each other by the factor premium they are exploiting. The index family contains indices based on the following single factors: carry, low risk, momentum, quality, size and value. An additional multi-factor index gathers stocks with a high overall tilt to all single factors.

Key facts

- » Range of six different single-factor indices
- » Multi-factor approach to gather highest exposure from each dimension
- » Selection and weighting based on optimizer
- » Monthly rebalancing to be more reactive to the market
- » Set of constraints to minimize risk and maximize factor exposure

Methodology

Components are selected from the STOXX® USA 900 Index according to optimization-based factor expo-sure and a set of constraints. Each factor, as input for the index optimization, consists of several base or sub-factors. These sub-factors consist of different ratios calculated from base data (e.g. balance sheet, income statement or price) or from other subfactors. Sub-factors are then grouped by topic or style; each group combined creates the final factor.

The multi-factor index derives a companys final factor score from its composite score across all single factors of the index family. The detailed methodology including the calculation formula can be found in our rulebook (http://www.stoxx.com/indices/rulebooks.html), while details regarding the optimization process can be found in the SunGard APT Modeling Guide (http://empower.fisglobal.com/rs/134-VDF-014/images/APT-Modelling-Guide.pdf).

Quick foote

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

gr. div. yield is calculated as gr. return index return minus price index return
