

# STOXX® EUROPE 600 REAL ESTATE CAP INDEX

## Index description

The STOXX Real Estate Cap indices track the performance of the top real estate investment trusts (REITs) and real estate holding and development stocks in Europe, the Americas and Asia/Pacific.

The three regional real estate indices are derived from the STOXX Global 1800 Index, and include securities that are classified as investing either directly or indirectly in real estate through development, management or ownership - including property agencies, REITs or listed property trusts (LPTs) - according to the Industry Classification Benchmark (ICB), a global sector classification standard.

Unlike supersector indices, they have a cap of 20% imposed on a component level.

## Key facts

»Categorization according to their primary source of revenue guarantees an accurate classification of companies in their respective business environments

»Component capping ensures that no component can dominate the index

## Methodology

Companies must be part of the STOXX Global 1800 Index, a broad yet liquid index comprising the 600 largest stocks by free-float market cap from each of the following three regions: Europe, North America and Asia/Pacific. Companies must be classified according to ICB supersector code 3510 (Real Estate) as investing directly or indirectly in real estate investment services. The indices are weighted according to free-float market cap. The detailed methodology including the calculation formula can be found in our rulebook: [www.stoxx.com/indices/rulebooks.html](http://www.stoxx.com/indices/rulebooks.html)

## BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

## CUSTOMIZATION

The index can be used as a basis for the definition of STOXX Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers a wide range of customization, in terms of component selection, weighting schemes and personalized calculation methodologies.

<sup>3</sup> Net dividend yield is calculated as net return index return minus price index return
