

EURO STOXX® QUALITY DIVIDEND 50 INDEX

Index description

The EURO STOXX Quality Dividend 50 Index systematically aims at selecting the top 50 stocks in terms of quality and dividend yield from the EURO STOXX index, whilst minimizing overall volatility of the derived index.

Key facts

- » Ideal to achieve a balanced exposure between a dividend paying and a high quality strategy
- » Liquid universe ensured by the use of the ADTR screening
- » Balanced approach between the different screenings
- » Diversification though capping of component weights to 4% and number of companies per industry to 15

Performance and annual returns⁴

Methodology

The EURO STOXX Quality Dividend 50 Index aims to select 50 high quality, high dividend-paying and low volatility stocks.

Starting from an index universe defined by the EURO STOXX Index, a number of less liquid stocks is filtered out. In the first step of the selection process, a quality score is assigned to the remaining stocks. This derives from 3 different quality factors: 12-month trailing dividend yield, 12-month trailing payout ratio and 3-year free cash flow yield growth rate. Each stock is given a standardized score (z-score) for each of the 3 metrics, and the final quality score assigned to them is the sum of the 12-month dividend yield z-score, the negative of the 12-month payout ratio z-score and the 3-year FCF / net income growth rate z-score. All stocks which do not belong to the top x% in terms of quality score, are excluded from the selection process (x being calculated as the square root of the number of eligible stocks divided by 50). All remaining stocks are then ranked in ascending order in terms of volatility and the top 50 are selected.

DISCLAIMER

STOXX, Deutsche Boerse Group (DBAG) and their licensors, research partners or data providers do not make any warranties or representations, express or implied, with respect to the timeliness, sequence, accuracy, completeness, currentness, merchantability, quality or fitness for any particular purpose of its index data and exclude any liability in connection therewith. STOXX, DBAG and their licensors, research partners or data providers are not providing investment advice through the publication of indices or in connection therewith. In particular, the inclusion of a company in an index, its weighting, or the exclusion of a company from an index, does not in any way reflect an opinion of STOXX, DBAG or their licensors, research partners or data providers on the merits of that company. Financial instruments based on the STOXX® indices, DAX® indices or on any other indices supported by STOXX are in no way sponsored, endorsed, sold or promoted by STOXX, DBAG or their licensors, research partners or data providers.

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

³ gr. div. yield is calculated as gr. return index return minus price index return
