

STOXX® EMERGING MARKETS 800 LO MINIMUM VARIANCE INDEX

Index description

The STOXX® Minimum Variance Indices seek to represent the performance characteristics of a minimum variance strategy applied to a variety of STOXX® regional and country benchmark indices. The index composition is determined by minimizing the total portfolio risk subject to a set of constraints.

For most Minimum Variance Indices, STOXX offers two versions: a constrained version that limits deviations from the benchmark by imposing constraints on style and industry exposures, and an unconstrained version that allows larger deviations from the benchmark for a more optimal portfolio.

The STOXX Minimum Variance Indices are designed in cooperation with Axioma, a leading provider of risk management solutions.

The indices are available for different regions and countries worldwide.

Key facts

- » Provides lower volatility compared to its benchmark.
- » Turnover, liquidity and component constraints ensure tradability.
- » Capping constraints avoid concentration risk and ensure UCITS compliance.
- » Unconstrained version has more freedom to reduce risk in resulting portfolio.
- » Suitable for core allocation in a portfolio.

Descriptive statistics

Index	Market cap (USD bn.)		Components (USD bn.)				Component weight (%)		Turnover (%)

Methodology

The index universe is the corresponding STOXX benchmark index. Using Axioma's factor risk model, the total risk of the portfolio is minimized subject to a set of constraints. The constraints control turnover, limit active exposures compared to the benchmark, and ensure tradability. The full index methodology can be accessed in our index rulebook:

<http://www.stoxx.com/indices/rulebooks.html>

Quick facts

Weighting	Optimization
Cap factor	4.5% / 8% / 35%
No. of components	Variable
Review frequency	Quarterly
Calculation/distribution	dayend
Calculation hours	22:00:00 22:00:00
Base value/base date	100 as of May. 04, 2012
History	Available daily back to Mar. 18, 2005
Inception date	May 16, 2018

DISCLAIMER

STOXX, Deutsche Boerse Group (DBAG) and their licensors, research partners or data providers do not make any warranties or representations, express or implied, with respect to the timeliness, sequence, accuracy, completeness, currentness, merchantability, quality or fitness for any particular purpose of its index data and exclude any liability in connection therewith. STOXX, DBAG and their licensors, research partners or data providers are not providing investment advice through the publication of indices or in connection therewith. In particular, the inclusion of a company in an index, its weighting, or the exclusion of a company from an index, does not in any way reflect an opinion of STOXX, DBAG or their licensors, research partners or data providers on the merits of that company. Financial instruments based on the STOXX® indices, DAX® indices or on any other indices supported by STOXX are in no way sponsored, endorsed, sold or promoted by STOXX, DBAG or their licensors, research partners or data providers.

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

³ gr. div. yield is calculated as gr. return index return minus price index return
