Methodology

Components are selected from the EURO STOXX Index according to their sustainability rating (combination of company and sector rating). All companies with a positive sustainability rating are included in the index.

A rating is defined as positive if the combination of the company and the sector rating results in a shaded matrix field in the Sarasin Sustainability Matrix.

In deviation from Bank J. Safra Sarasin's standard approach, STOXX is including tobacco, adult entertainment and defense & armament in the universe for STOXX Europe Sustainability and EURO STOXX Sustainability. These criteria are considered for exclusion in the indices STOXX Europe/ EURO STOXX Sustainability ex AGTAF/ ex AGTAFA respectively.

The detailed methodology including the calculation formula can be found in our rulebook: www.stoxx.com/indices/rulebooks.html
