Methodology

The STOXX ASEAN-Five Select Dividend 50 Index is derived from the STOXX Asia Total Market Index (TMI). In the first step, all companies from the following countries are selected: Indonesia, Malaysia, Philippines, Singapore and Thailand. To be included in the index, a company must have a minimum three-month average daily trading volume (3-month ADTV) of 1.5 million US dollars. Stocks with a payout ratio below 0% or higher than 80% and stocks of real estate investment trusts (REITs) are excluded. Finally, all remaining stocks are ranked by their twelve-month historical dividend yield and the top 50 stocks are selected and ranked by their free-float market cap. A 35-70 buffer rule is applied. A cap of 15 companies per country prevents any one country from dominating the index. (Note: there is no minimum requirement). The detailed methodology including the calculation formula can be found in our rulebook: www.stoxx.com/indices/rulebooks.html

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers a wide range of customization, in terms of component selection, weighting schemes and personalized calculation methodologies.
