

STOXX® EUROPE MAXIMUM DIVIDEND 40 INDEX

Index description

The STOXX® Europe Maximum Dividend 40 Index is designed to maximize the dividend yield of the index portfolio. The index comprises 40 stocks from the STOXX® Europe 600 Index with the highest expected dividend yield. The dividend yield is calculated on the basis of a three-month dividend forecast and the closing price of the securities at the time of selection.

The index family covers the Global, North America, Europe, Asia/Pacific and Japan regions.

Key facts

» Quarterly review to track as closely as possible the performance of the highest dividend-yielding companies and to take into account the fact that dividend payments take place frequently throughout the year in North America

» Portfolio is screened for liquidity based on two criteria: index constituents must have a three-month average daily trading volume (3-month ADTV) of at least 4 million euros and stocks are selected on the basis of their liquidity-adjusted dividend yield

» Well-diversified, due to 10% component capping

» Weighting of single components is based on their expected liquidity-adjusted dividend yield: the higher the dividend yield of a company and the higher its liquidity, the higher its weighting in the index

Performance and annual returns⁴

Methodology

The index universe consists of all components of the STOXX® Europe 600 Index. Only 40 companies that have the highest expected dividend yield and will pay a dividend within the forthcoming adjustment period are chosen for inclusion. Liquidity (measured by Average Daily Traded Value) and market capitalization filters are applied. The expected dividend yield is determined by the announced amount, the estimated dividends and the closing price of the stock on the last trading day of January, April, July and October. The resulting composition is effective on the third Friday of March, June, September and December. The detailed methodology including the calculation formula can be found in our rulebook:

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers a wide range of customization, in terms of component selection, weighting schemes and personalized calculation methodologies.

³ gr. div. yield is calculated as gr. return index return minus price index return
