Methodology

At each review date, all European stocks are screened for their one-year historical dividend yield and one-year historical volatility. For each company, a score is calculated as following: rank its dividend yield in descending order, rank its volatility in ascending order, calculate the average of both ranks. Thirty companies with the highest score (i.e. the highest average of both ranks) are included in the index.

Each component has a free-float market cap weighting, with a 10% capping at the component level.

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance .

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

[3] Net dividend yield is calculated as net return index return minus price index return
