STOXX announces results of annual emerging and developed markets classification review

Dear Sir and Madam,

STOXX Ltd., the operator of Qontigo's index business and a global provider of innovative and tradable index concepts, today announced the results of the annual Country Classification review.

As of September 19th, 2022, out of the 62 countries in the STOXX index universe, 25 are classified as developed markets, and 20 are classified as emerging markets. A full list of countries including their classification can be found under the dedicated country classification section of the STOXX website: <https://www.stoxx.com/country-classification>.

There will be no changes in the classification of the 62 countries in the STOXX index universe.

The intermediary results indicated **Czech Republic, Luxembourg and New Zealand** as oscillating between classification levels. These countries will be captured in the Watch List and maintain their last classification levels, following a STOXX governance decision and in line with section 4.3 of the STOXX Index Methodology Guide.

Country	STOXX Classification (Intermediary results)	Watch List	STOXX Final Classification Results
Czech Republic	Not Classified	Yes	Emerging
Luxembourg	Not Classified	Yes	Developed
New Zealand	Emerging	Yes	Developed

The STOXX market classification model relies on a completely rules-based and transparent methodology, and is the first such concept to exclude any subjective decisions from the process. The six criteria for the classification of a country as a developed market include macroeconomic data, market cap, market liquidity, free currency convertibility on onshore and offshore markets, restrictions on capital flows, and governance based on political stability, control of corruption and regulatory quality. The data source for the diverse criteria are highly renowned and independent global organizations (i.e. World Bank, Thomson Reuters)
