STOXX® EUROPE 50 INDEX

Index description

The regional blue-chip indices are derived from regional subsets of the STOXX Global 1800 Index. The indices cover the largest supersector leaders of their region in terms of free-float market cap.

Key facts

»Diversified, as they incorporate a capping factor to ensure that no country/component can dominate the index

»Buffers are used to achieve the fixed number of components and to maintain stability of the indices by reducing index composition changes

»A fast-exit rule ensures the index accurately represents the performance of only the biggest and most liquid stocks
