Description of factors considered.	<p>UNGC Violations: Sustainalytics' Global Standards Screening provides an assessment of a company's impact on stakeholders and the extent to which a company causes, contributes or is linked to violations of international norms and standards (UNGC, OECD, UNGPs and their underlying conventions).</p> <p>Level Involvement Score: Sustainalytics assesses companies for their level of involvement in controversies that have an impact on the environment or society and the associated business risks companies face from such involvement. Each controversy is categorized from Category 1 (low ESG impact) to Category 5 (severe ESG impact).</p> <p>Physical Risk Score: ISS ESG's new Climate Physical Risk Analysis, within the Climate Impact Report, provides investors with in-depth, proprietary financial analysis to help assess the financial impact of physical climate risks on assets, issuers and portfolios. The ISS ESG climate physical risk assessment gives the investor a holistic overview of its exposure to physical climate risks</p> <p>Carbon Risk Ratings assess a company's carbon risk, driven by the transition to a low-carbon economy. The ratings are determined by evaluation of a company's material exposure to and management of carbon issues.</p> <p>The ISS ESG SDG Impact Rating identifies companies' positive and negative impact towards the UN Sustainable Development Goals (UN SDGs) across three pillars: Product & Services, Operations and Controversies. STOXX will use the dataset to minimize index exposure to obstructions in the 4 environmental related UN SDGs, SDG 12 Responsible Consumption and Production, SDG 13 Climate Action, SDG 14 Life Below Water and SDG 15 Life On Land., by screening out companies identified to have significant obstruction in these areas.</p>	

	<p>Decrement Plan Computation Score: Measures the annualized emissions reduction percentage calculated from ISS referencing data from both current and 2050 forecasts</p> <p>Controversy Rating: Sustainalytics assesses companies' involvement in incidents with negative ESG implications. A controversy is defined as an event or aggregation of events relating to an ESG topic and is measured by its severity on a scale of 1 to 5 (1- Low, 2- Moderate, 3- Significant, 4- High, 5- Severe).</p> <p>Controversial Weapons: Sustainalytics' Controversial Weapons Radar monitors company involvement in the following areas: anti-personnel mines, biological and chemical weapons, cluster weapons, depleted uranium, nuclear weapons and white phosphorus weapons.</p> <p>Product Involvement: ISS ESG Product Involvement Research identifies companies' involvement on a range of product involvement categories.</p> <p>More detailed information on the application of these categories is available within the relevant methodology guides. https://www.stoxx.com/rulebooks</p>
