

Guide to the DAX Equity Indices

Formerly known as Guide to the Equity
Indices of Deutsche Börse AG

Version 11.3.1

Published on 28 February 2023

Effective 28 February 2023

General Information

With effect to August 2019 Deutsche Börse AG has transferred the administration of the DAX Equity Indices formerly known as the Equity Indices of Deutsche Börse AG to its affiliate STOXX Ltd.

STOXX Ltd. develops, creates, and publishes Indices for certain uses, e.g., the issuance of Financial Instruments. In general, an Index is any figure published or made available to the public that is regularly determined by the application of a formula (or any other method of calculation, or by an assessment) on the basis of the value of one or more underlying assets or prices, including estimated prices, actual or estimated interest rates, quotes and committed quotes, or other values or survey.

All DAX Equity Indices are governed by the respective index methodology applicable to the respective index or index family. Purpose of this Guide to the DAX Equity Indices ("Guide") is to provide for a comprehensible index methodology in continuity of the former Guide to the Equity Indices of Deutsche Börse AG as last amended with effect from 26 June 2019 (version 9.2.4).

In order to ensure the highest quality of each of its indices, STOXX Ltd. exercises the greatest care when compiling and calculating equity indices on the basis of the rules set out in this Guide.

However, STOXX Ltd. cannot guarantee that the various indices, or the various ratios that are required for index compilation and computation purposes, as set out in this Guide, are always calculated free of errors. STOXX Ltd. accepts no liability for any direct or indirect losses arising from any incorrect calculation of such indices or ratios.

The DAX Equity Indices in no way represent a recommendation for investment. In particular, the compilation and calculation of the various indices shall not be construed as a recommendation of STOXX Ltd. to buy or sell individual securities, or the basket of securities underlying a given index.

1 Introduction

1.1 Principles for Index Calculation

The DAX Equity Indices are calculated based on the following principles wherever possible:

- Representative: The indices aim to best represent the performance of the target market
- Tradeable: Index components are tradeable in relation to the size of the companies and the target market
- Replicable: Performance of indices can be tracked by an actual portfolio
- Stable: High degree of index continuity
- Rules-based: Index calculation and changes to the index composition follow transparent rules
- Predictable: Changes to index rules are publicly announced with a reasonable notice period (generally at least 2 trading days), and are never implemented retroactively
- Transparent: Decisions are based on public information

1.2 Advisory Body

The Advisory Board for Equity Indices (“Arbeitskreis Aktienindizes”) provides advice on topics related to indices administered by STOXX Ltd and referenced in this guide. It acts as an advisory body based on the basic principles mentioned and the rules of these guidelines. The Advisory Board does not take binding decisions on behalf of STOXX Ltd.

The Advisory Board for Equity Indices consists of employees appointed by STOXX Ltd. and representatives of leading national and international financial institutions. The Advisory Board's meetings usually take place not later than the sixth trading day in March and September. Extraordinary meetings may also be convened.

1.3 Discretion

Save for the cases expressly described in this Guide, the index methodology is entirely rule-based and automatic. Discretion only applies if expressly stated and must be exercised as provided for in this Guide.

1.3.1 Exercise of Discretion

Discretion may only be exercised by STOXX Committee(s) (as defined hereafter) with a view to resolve issues arising in maintaining the prevailing index methodology in response to events, with an overarching aim to accurately and reliably measure the market or economic realities as defined in this Guide.

Discretion shall be exercised in line with the following principles:

- The body or person(s) exercising discretion must not be affected by a conflict of interest;
- The body or person(s) exercising discretion must have the requisite skills, knowledge and experience to exercise such discretion;

- All facts and circumstances relevant for the exercise of discretion must have been established and properly documented prior to the exercise of discretion;
- The exercise of discretion must comply with all applicable laws and regulations;
- The body or person(s) exercising discretion must act on the basis of the relevant facts and circumstances only, must give proper weight to the various considerations and ignore irrelevant facts and circumstances;
- The body or person(s) exercising discretion must act with a view to maintain the integrity of the market or economic reality by aiming to ensure that indices remain representative and can be replicated, taking into account, inter alia, some, or all of the following:
 - Relevance of the event to the DAX indices
 - Trading accessibility of the affected market
 - Availability of alternative markets
 - Ability of market participants to replicate the index or, where applicable, the results of the index review
 - Public information related to the events and their development in the foreseeable future
- The body or person(s) exercising discretion must act honestly, reasonably, impartially and in good faith.

As part of the decision-making process, STOXX may consult with external stakeholders.

Discretionary Rule: *Any exercise of discretion must take into account the rationale of the index, the purpose of the rules with regard to which discretion is exercised, the objective to preserve market integrity and reliability of the index calculation to avoid undue market impact, the technical feasibility and economic reasonability, and the interest of licensees or investors.*

The cases in which STOXX Ltd. may exercise discretion regarding the index methodology and its application are noted in the respective rules of this Guide.

The following bodies (hereafter each of them separately also referred to as “STOXX Committee”) are involved in the decision-making process relevant for the indices governed by this Guide:

- Product Initiation Committee (PIC),
- Product Approval Committee (PAC),
- Index Operations Committee (IOC),
- Index Management Committee (IMC),
- Index Governance Committee (IGC),
- Oversight Committee (OC),
- Management Board (MB).

The following table summarizes the cases in which STOXX Committee(s) may exercise discretion regarding the index methodology and its application

Case	Responsible STOXX Committee
Index Termination and Transition	IGC
Sector Affiliation	IGC
Exclusion from Rankings	IGC
Deviation from Fast Exit/Fast Entry rules and Regular Exit/Regular Entry rules in exceptional cases	IGC
Procedure in case of a breach of the Basic Criteria	IGC
Determination of expected price to new shares in case of Subscription Rights on Other Share Classes	IGC
Procedure for Subscription Rights on Instruments with Embedded Options	IGC
Limitations	IGC

PAC, IGC

1.4 Index Termination Policy

For termination of an index or an index family that underlie financial products issued on the market, to the knowledge of STOXX Ltd., a market consultation will be conducted by STOXX Ltd. in advance of the termination in line with STOXX Transition Policy and STOXX Consultation Policy (publicly available on STOXX website). The length of the consultation period will be defined in advance based on the specific issues of each proposed termination subject to STOXX Benchmark Transition Policy (Discretionary Rule, see Section 1.3). During the consultation period, clients and third parties will have the chance to share their concerns regarding the termination of the index or index family. Based on the collected feedback, STOXX Ltd. may rethink its decision to terminate

an index or an index family (Discretionary Rule, see Section 1.3). At the end of the consultation period, STOXX Ltd. will publicly announce its final decision about the termination. A transition period will be granted in the event of termination (Discretionary Rule, see Section 1.3).

For termination of an index or an index family that do not underlie financial products issued on the market, no market consultation will be conducted.

2 Determination of Index Parameters

2.1 Ex-Date

The ex-date is the date as of which securities are traded without a specific corporate action, e.g. spin-off, or without a specific right, e.g. dividend claim or subscription right.

2.2 Fixed Holdings

The shares of a company that are not assigned to the free float are considered fixed holdings. By definition, these shares cannot be freely traded.

2.3 Free Float

1. Free float refers to the freely tradeable shares of a company that are not held in fixed ownership. The following rules apply to determine the free float: All shareholdings of an owner which, on an accumulated basis, account for at least 5 percent of a company's share capital attributed to a class of shares are considered to be non-free float. Shareholdings of an owner also include shareholdings

- held by the family of the owner as defined by section 19 of the Market Abuse Regulation (MAR),
- for which a pooling has been arranged in which the owner has an interest,
- managed or kept in safe custody by a third party for the account of the owner,
- held by a company which the owner controls as defined by section 290 (2) of the German Commercial Code (HGB),
- subject to a statutory or contractual qualifying period of at least six months.

This does not include shareholdings of

- asset managers and trust companies,
- funds and pension funds,
- investment companies or foreign investment companies in their respective special fund assets

insofar as they are held as part of short-term investment strategies and the size of a shareholding does not exceed 25 percent of a company's share capital. This does not apply to shareholdings held by venture capital companies, government funds or shareholdings held by their financial agencies, or supranational funds.

In this context, shares for which the acquirer has at the time of purchase clearly and publicly stated that strategic goals are being pursued and that the intention is to influence the company policies and ongoing business of the company in the long-term are not considered a short-term investment. In addition, shares having been acquired through a public purchase offer will not be considered a short-term investment.

2. Shares of an owner that are subject to a statutory or contractual qualifying period of at least six months with regard to their disposal and shares held by the issuing company (treasury shares) are – irrespective of the size of a shareholding – always considered fixed holdings.

3. In case of an ongoing takeover, shares that are under the control of the overtaking companies via derivatives will also be considered for the determination of the stock's free float. The derivatives need to be subject to registration and correspondingly registered according to legislation in Securities Trading Act (WpHG) and Securities Acquisition and Takeover Act (WpÜG).

The various criteria laid down in numbers 1 to 3 are also fully applied to classes of shares that are subject to restrictions of ownership. For the purpose of the determination of the free float as described above, each ISIN under which shares are traded is considered a separate share class.

If STOXX Ltd. determines and publishes company's free float within the framework of a scheduled chaining, this free float factor will only be changed or corrected at the next scheduled chaining date. This is also the case if STOXX Ltd. learns of facts or circumstances following the determination of the free float that would have resulted in the determination of a different free float factor had they been known at the time of the determination.

2.4 Free Float Market Capitalization

Free Float Market Capitalization is the product of market capitalization and the Free Float factor.

2.5 Share Capital

The share capital is the number of all outstanding shares in a company.

2.6 Turnover Rate

A Turnover rate is calculated for each security on the ranking list. It is determined as the ratio of 12-months Order Book Volume divided by free float market capitalization as defined in sections 2.4 and 2.10.

2.7 Legal Headquarters

The operating centre (head office) of commercial companies is termed the legal headquarters. It is generally specified in the articles of association.

2.8 Operating Headquarters

The operational headquarters is the location of (part of) the executive management or (part of) the administrative management.

2.9 Market Capitalization

The product of the number of outstanding shares of a company's share class and the price of the respective share class is defined as the market capitalization of a company's share class.

2.10 Order Book Volume

The sum of the turnover determined on Xetra® and Börse Frankfurt for the respective share classes of a company is defined as the Order Book Volume.

The period over which the turnover is calculated is stipulated individually for each index type and will be applied pursuant to the specific provisions for the respective index type.

2.11 Sector Affiliation

For the purpose of Sector Indices as described in Section 3.3 companies are assigned to the sectors according to the sector classification (under Section 11.3). Sector assignment is dependent upon the respective company's sales focus

Changes in the sector assignment are based on the annual review of the sector classification of listed companies on the regulated market of FWB Frankfurt Stock Exchange and will be reflected on the August ranking list (published as of the third trading day in September). If a company's sector classification changes extraordinarily, due to a change of the company's sales focus (respectively investment focus in case of an investment company) the company will be reclassified on the following quarterly chaining date. The cut-off date for the extraordinary change in the sector classification is the cut-off date of the quarterly ranking list (i.e. the ranking list published in March, June, September, December). Extraordinary changes of the sector classification are also performed in the Scale Segment.

The following rule shall apply for investment companies: Investment companies are initially allocated to the Financial Services/Private Equity & Venture Capital sector. If the activities of a company extend to several industrial areas, the company is allocated to the "Industrial/Industrial Diversified" sector (Discretionary Rule, see Section 1.3). Investment companies with a clear focus on a certain sector are allocated to that sector.

2.12 XLM – Xetra® Liquidity Measure

The Xetra® Liquidity Measure (XLM)¹ is given in basis points (100 basis points = 1 percent) and relates to the relevant market impact costs of the so-called “roundtrip” (simultaneous purchase and sale of a position) for a given order volume. Since July 2002, the measure has been calculated over the entire trading day for all shares in continuous trading on Xetra®. An XLM of 10 basis points and an order volume of €25,000, for example, mean that the market impact costs for the purchase and sale of this share totalled €25. The lower the XLM, the lower the market impact costs for the trading of a share and the higher the liquidity of a share and its trading efficiency.

3.1 Selection Indices

The Selection Indices represent the largest companies in terms of market capitalization on the regulated market of Frankfurt Stock Exchange that fulfil certain minimum quality requirements.

DAX®

The DAX® Index includes the 40 largest companies in terms of market capitalization on the Regulated Market of FWB® Frankfurt Stock Exchange that fulfil certain minimum quality and profitability requirements. In contrast to the other selection indices MDAX, SDAX and TecDAX, companies in DAX index must fulfil a profitability requirement in the two most recent fiscal years in order to be eligible for inclusion into DAX Index. The detailed admission criteria are given in section 4.1.

The DAX® price index has continued the Börsen-Zeitung index, which historically extends back to 1959, since its introduction.

MDAX®

MDAX® includes the 50 companies which follow DAX® companies in terms of market capitalization or that are not eligible for DAX® inclusion because they don't fulfil its profitability requirements and that fulfil minimum quality requirements. The detailed admission criteria are given in section 4.1.

SDAX®

SDAX® includes the 70 companies which follow after MDAX® companies in terms of market capitalization and that fulfil minimum quality requirements. The detailed admission criteria are given in section 4.1.

TecDAX®

The TecDAX® Index includes the 30 largest companies in terms of market capitalization that fulfil minimum quality requirements. Tech is hereby defined according to the sector classification in section 4.1.

HDAX®

Together, the 40 companies from DAX® Index, the 50 companies from MDAX® Index and the 30 companies from TecDAX® index form HDAX®'s index portfolio. Hereby, companies that are included in both TecDAX and DAX or MDAX are considered only once. As a result, this index includes the large and medium-sized companies in the Regulated Market without any sector restriction.

Scale 30 Index

The Scale 30 Index selects the most liquid companies from the Scale segment. It covers the 30 most liquid companies by 12-months Order Book Volume that are traded on Xetra®. Companies that are traded on Börse Frankfurt only are not eligible. Similar to the methodology of the DAX family, trading values from Börse Frankfurt as well as Xetra® are considered. The Scale 30 Index offers a liquid alternative for qualified investors who are able to evaluate the opportunities and risks in a market segment with low transparency standards.

DAX® ex Financials Index

DAX® ex Financials Index corresponds to the composition of the DAX® Index excluding the FIRE super sector (Finance, Insurance and Real Estate). It therefore tracks the DAX constituents which are not part of the FIRE super sector. It thus includes a variable number of companies which tends to be lower than 40. The detailed admission criteria are given in section 4.1.3.

DAX® ex Financials 30 Index

The DAX® ex Financials 30 Index tracks the companies in the Regulated Market which do not belong to the FIRE super sector (Finance, Insurance and Real Estate) and that fulfil certain minimum quality requirements. It always has 30 companies. These are selected according to market capitalization. The detailed admission criteria are given in section 4.1.4.

DAX® 50 ESG

The DAX® 50 ESG tracks the performance of the 50 largest stocks listed on the regulated market of Frankfurt Stock Exchange that have comparatively good performance based on their Environmental, Social and Governance scores. Further, the stocks must have passed standardized ESG screens related to Global Compact Principles, as well as the involvement in controversial weapons, tobacco production, thermal coal, nuclear power and military contracting. The base universe of the index is the HDAX. The detailed criteria for constituents' selection are given in section 4.1.5

3.2 All Share Indices

Prime All Share

Each of the companies listed on FWB® Frankfurt Stock Exchange can decide whether to apply to be listed in General, Prime or Scale Segment. Inclusion in Prime Standard results in higher post-

admission obligations regarding transparency. With Prime All Share, STOXX Ltd. administers an index that measures the overall performance of all the companies in this segment.

Technology All Share

All Prime Standard companies below the DAX® Index assigned to technological sectors are summarised in the Technology All Share Index. The restriction to companies below DAX is there to prevent DAX® companies from dominating. The Technology All Share Index has continued NEMAX® All Share's historical index data since the latter's discontinuation.

Classic All Share®

All Prime Standard companies below the DAX® Index assigned to traditional sectors are summarised in the Classic All Share® Index. The restriction to companies below DAX® is there to prevent DAX® companies from dominating.

CDAX

The CDAX® Index includes all German companies in the Prime Standard and General Standard segments. CDAX therefore measures the performance of the entire German stock market and is ideal for analysis purposes.

General All Share

Similar to Prime All Share, the General All Share Index includes all companies listed in the General Standard segment and outlines the performance of this segment.

Scale All Share Index

The Scale All Share Index includes all companies in the Scale segment. It therefore describes the overall performance of all companies in the Scale segment. The Scale All Share is geared primarily towards qualified investors who are able to evaluate the opportunities and risks in a market segment with low transparency standards.

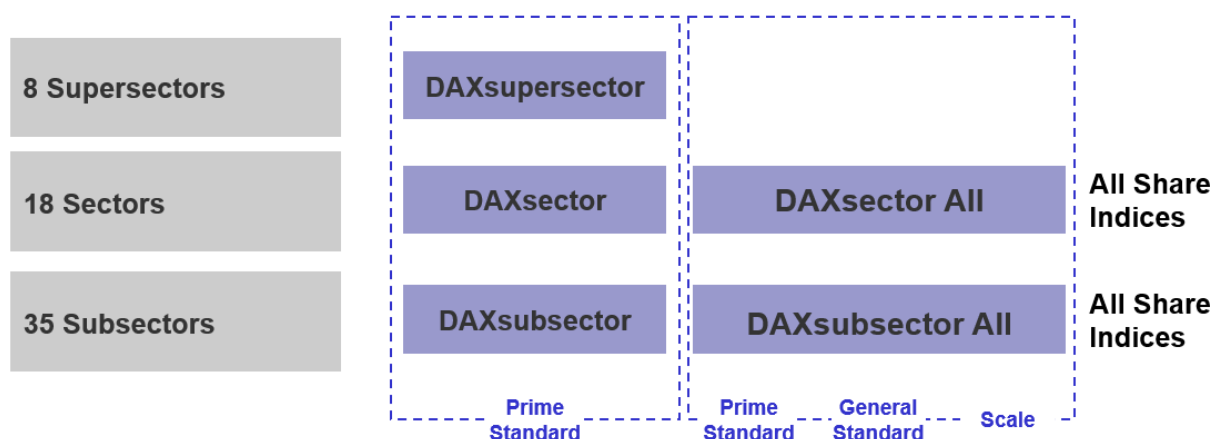

3.3 Sector Indices

STOXX Ltd. calculates sector indices for the Prime Standard segment as well as for a larger representative portfolio comprising all companies listed in Prime Standard, General Standard and Scale segment.

For both the Prime segment as well as the larger portfolio, 18 sector indices and 35 subsector indices are provided. In addition, eight super sector indices are calculated for the Prime segment. Sector and subsector indices are designed as All Share indices, whereas only companies with an ADTV⁴ of at least €1 million qualify for the super sector indices. The various Prime sectors have been based on the historical index data of the CDAX® sector indices since April 1999. In the appendix a table shows the different super sectors, sectors and subsectors (section 11.3). The classification of companies into the

⁴ ADTV = average daily trading volume

respective traditional or technology sectors is done on the basis of the subsectors (section 11.3). The diagram below provides an overview of the sector indices:

3.4 International Indices

In order to provide a visibility platform for all German and foreign companies listed on the FWB[®] Frankfurt Stock Exchange, STOXX Ltd. calculates international indices that each contain 100 German and 100 foreign companies. These 200 companies listed in either Prime Standard, General Standard or Scale segment are selected on the basis of their Order Book Volumes on Xetra[®] over the last three months. The DAX International 100 comprises the first 100 companies based on the previous three months' Order Book Volume and the subsequent 100 companies by the same criterion form the portfolio of DAX International Mid 100.

3.5 Index-Based Calculation Products

3.5.1 X-Indices

The X-indices X-DAX[®], X-MDAX[®] and X-TecDAX[®] are calculated based on events and distributed from 8:00 am until 9:00 am (X-DAX[®]: until DAX-opening⁵) and from 5:30 pm until 10:15 pm. The calculation of the X-DAX Index is based on the daily comparison of the DAX[®] index values with the respective future. The calculation of the X-MDAX and the X-TecDAX is based on "cost of carry"-adjusted MDAX[®] and TecDAX[®] futures prices. The X-indices act as indicators for market development outside Xetra[®] trading hours.

The longer computation time of X-indices covers the entire trading time of US stock exchanges.

XDAXDAX[®] is calculated and distributed as a combination of X-DAX[®] and DAX[®]. This serves the need of market participants to monitor the price change of DAX[®] during the trading day including pre and

⁵ Valid as of 8 February 2010.

post DAX[®] indicators in one time series. With XDAXDAX[®] DAX[®] and X-DAX[®] are merged and distributed using one ISIN.

3.5.2 Late/Early Indices

Outside Xetra[®] trading hours, STOXX Ltd. calculates the indices L/E-DAX, L/E-MDAX, L/E-SDAX and L/E-TecDAX every 60 seconds using prices traded on Börse Frankfurt. These indices correspond in composition to the respective DAX[®], MDAX[®], SDAX[®] and TecDAX[®] indices. They serve as an indicator of market development outside the regular Xetra[®] trading period for investors. All L/E indices are calculated as performance indices only.

4 Regular Index Review

Depending on the concept of composition, indices are either designed to be All Share indices (including Sector indices) or Selection indices.

4.1 Selection Indices

The Selection Indices represent the largest companies on the Regulated Market of Frankfurt Stock Exchange. These are selected according to Free Float Market Capitalization. The indices are DAX®, MDAX®, SDAX®, TecDAX®, HDAX®, Scale 30 Index, DAX® ex Financials Index and DAX® ex Financials 30 Index.

The DAX 50 ESG represents the largest companies that have comparatively good performance based on their Environmental, Social and Governance criteria. These are selected according to market capitalization and Sustainalytics' ESG score.

4.1.1 DAX, MDAX, SDAX and TecDAX

4.1.1.1 Basic Criteria

The basic criteria for including companies in DAX®, MDAX®, SDAX® and TecDAX are:

- An existing listing on the Regulated Market of the FWB® Frankfurt Stock Exchange
- Continuous trading on Xetra®
- Minimum Free Float of 10%
- Legal headquarters or operating headquarters in Germany
- Legal headquarters in EU/EFTA or operating headquarter in Germany sufficient for foreign companies
- Publication⁶ of audited Annual Financial Report prepared according to the requirements of WpHG^{7 8}. The publication shall be completed within 90 days from the end of the reporting

⁶ The term publication refers to the publication of the report on the company website. STOXX Ltd. will use the service of data providers that collects the information from company websites to evaluate if requirements are met.

⁷ Sect. 114 Paragraphs 2 and 3 of the German Securities Trading Act (WpHG), and in case of group reporting requirements to Sect. 117 No. 1 WpHG

⁸ If the issuer is merely under the obligation to prepare individual Financial Statements, pursuant to Sect. 114 Paragraph 2 WpHG these individual Financial Statements prepared and audited in compliance with

- the national legal requirements of the state where the company is registered, in case of issuers who have their registered office in a member state of the European Union or of the Treaty on the European Economic Area,
- the legal requirements pursuant to HGB (subject to the "exemption options" mentioned below), in case of issuers who have their registered office in a third country,

have to be published.

STOXX will also accept the publication of individual Financial Statements prepared in compliance with IFRS principles. However, if issuers choose to publish IFRS-individual Financial Statements the reports published by them throughout the year will also have to be prepared pursuant to IFRS-principles.

If the issuer is obliged to prepare consolidated Financial Statements, the issuer always has to publish the Statements prepared in compliance with the Regulation (EC) No.1606/2002 of the European Parliament and of the Council of 19 July 2002 on the Application of International Accounting

period, in accordance with recommendation F.2 of the German Corporate Governance Code, but an additional grace period is given that allows the publication up until 4 months after the end of the reporting period. In order to fulfil the obligation of "publication of the audited Annual Financial Report" both the Annual Financial Report and the complete audit certificate have to be published. The Annual Financial Report must be provided in either German or English.

- Publication of half-yearly Financial Report (for the first six months of the fiscal year) prepared according to the requirements of WpHG⁹. The publication shall be completed within 45 days from the end of the reporting period, in accordance with recommendation F.2 of the German Corporate Governance Code¹⁰, but an additional grace period is given that allows the publication until 3 months after the end of the reporting period. The half-yearly Financial Report must be provided in either German or English. With regard to a company that is newly listed on the Regulated Market of FWB, the company must fulfil the requirement for the reporting period that ends immediately after its listing. The Criterion is deemed met for the reporting periods ending prior to the company's listing.
- Publication of the Quarterly Statement or Quarterly Financial Report for the first and third fiscal quarters. In terms of content, period coverage and format, the Quarterly Statement or Quarterly Financial Report must fulfil the follow-up obligations of the Regulated Market¹¹ for Prime Standard, irrespective of the segment of Regulated Market which the issuer is member of. The publication shall be completed within 45 days from the end of the reporting period, but an additional grace period is given that allows the publication until 75 days after the end of the reporting period. Quarterly Statement and Quarterly Financial Reports must be provided in either German or English. With reference to a Ranking List cut-off date, the Criterion is also deemed met provided that the company's Board of Directors and the Management Board have published on its website a statement of intent that states the company will publish Quarterly Statements or Quarterly Financial Reports for all preparation or reporting periods, respectively, ending after that cut-off date. A company that fails to adhere to its statement of intents is deemed to be in breach of the Criterion.

Standards (Official Journal of the EC No. L 243 Clause 1). Therefore, the consolidated Annual Financial Statements as well as the group Management Report prepared in compliance with the IAS/IFRS adopted by the EU and the interpretations related to these principles have to be published. In addition, also acceptable are consolidated Financial Statements and group Management Reports prepared in compliance with accounting standards, which have been acknowledged as equal to IFRS by the EU-Commission in its decision of 12 December 2008 (2008/961/EC), amended by the Commission Implementing Decision of 11 April 2012 (2012/194/EU), and by the Commission Regulation (EC) No. 1289/2008 of 12 December 2008 (these are: US-GAAP, Japanese GAAP as well as Chinese GAAP, Canadian GAAP and South Korean GAAP; for business years beginning prior to 01 January 2015, third country issuers may also prepare their reports in compliance with Indian GAAP).

⁹ Sect. 115 Paragraphs 2 to 4 of the German Securities Trading Act (WpHG) and in case of group reporting requirements to Sect. 117 No. 2 WpHG.

¹⁰ <https://www.dcgk.de/en/code/current-version/f-transparency-and-external-reporting.html>

¹¹ [EU-Regulated Market](https://www.deutsche-boerse-cash-market.com/dbcm-en/primary-market/being-public/ipo-line-being-public/regulated-market/lipo-21956-60156) and <https://www.deutsche-boerse-cash-market.com/dbcm-en/primary-market/being-public/ipo-line-being-public/regulated-market/lipo-21956-60156>

- No deviations are declared with respect to recommendations C.10 (with sole reference to its applicability to the Chair of the Audit Committee¹²), D.8 and D.9 of the German Corporate Governance Code¹³. The criterion is assessed based on the Declaration of Conformity published for the calendar year in course or, if the publication deadline of the Declaration of Conformity is yet to come, for the previous year. If no such Declaration of Conformity is publicly available, or if it declares deviations from the above recommendations, the criterion is considered breached. Companies that are newly listed on the Regulated Market of FWB and have not issued the mandatory annual Declaration of Conformity at the time of listing, are deemed to meet the criterion provided that the company's executive board (Vorstand) and supervisory board (Aufsichtsrat) have published on its website a statement that confirms the company does not deviate from the above recommendations. The statement is considered valid until the first compulsory annual Declaration of Conformity is published.
A foreign company that is not required to publish a Declaration of Conformity with the German Corporate Governance Code is deemed to meet the criterion provided that it has published on its website a statement that confirms the company does not deviate from the above recommendations, as applicable accordingly to their legal form and jurisdiction. STOXX makes available under <https://www.dax-indices.com/ressourcen> the template that foreign companies shall use for the purpose of drawing such statement. Such statement must be published annually.
- Minimum Liquidity on FWB®:
 - Initial eligibility: in order to be ranked, a company that is not an index component at the Ranking List cut-off date must have a minimum Order Book Volume over the last 12-months of 1 bn EUR or show a Turnover Rate of 20% as described in 2.6. Companies that do not fulfil this criterion will not receive a rank.
 - Continued eligibility: for continued eligibility, a company that is an index component at the Ranking List cut-off date must have a minimum Order Book Volume over the last 12-months of at least 0.8 bn EUR or show a Turnover Rate of 10% as described in 2.6 in order to remain in the index. Companies that do not fulfil this criterion will not receive a rank any longer, until they fulfil the initial eligibility requirement again.

¹² This provision also applies to small supervisory boards within the meaning of Section 107 (4) sentence 2 AktG.

¹³ Any interpretation with regard to the mentioned recommendations is the responsibility of the company. Only those companies are eligible for ranking that do not declare any deviation from these recommendations. STOXX does not provide advice on the principles, recommendations, and suggestions of the German Corporate Governance Code.

4.1.1.2 Equity Index Rankings

The selection of companies in the DAX®, MDAX®, SDAX® and TecDAX® indices is based on Free Float Market Capitalization. The reporting date for collecting data (the Ranking List cut-off date) is the last trading day of the month for which the ranking list is created. The ranking list is created and published monthly by STOXX Ltd.

Creating the Ranking List

To create the ranking list, the parameters relevant for the allocation of a rank, i.e., number of shares, Free Float factor and VWAP, are recorded at the Ranking List cut-off date to determine the Free Float Market Capitalization for each company. At that date, also the compliance with the basic criteria is assessed. In addition, the EBITDA is collected to determine eligibility for DAX Index.

The following applies to Free Float market capitalization:

A volume-weighted average price over 20-trading days (20-trading day VWAP) is used to calculate the Free Float Market Capitalization. This is calculated for each share class as the average value of daily volume-weighted average prices based on Xetra® prices (VWAP) of the last 20 trading days. The 20-trading day VWAP on the last trading day of a month is used to create the ranking list.

The following applies to the Order Book Volume:

The Order Book Volume is the sum of the daily turnover of a class over a period of 12 months. The following special provisions apply:

- If the Order Book Volumes of a company are not available for the whole twelve-month period due to the time of its commencement of trading or its initial listing on one of the transparency standards, the Order Book Volumes of the first 20 trading days are ignored, and the remainder of the relevant data is linearly extrapolated to twelve months. This procedure, however, is only applicable to companies which have been traded for at least 30 days as per the reporting date, taking Order Book Volumes of at least ten days into account for extrapolation purposes.
- If a company has changed its trading segment (Open Market, Scale, General Standard and Prime Standard), the order book volume from the previous segment is taken into account as of the ranking list cut-off date following the segment change if it has a total trading history of more than 30 days.

The following provisions apply exclusively for DAX® Index:

In order to be considered eligible for the DAX® Index, companies that are not components of DAX® at the time the ranking list is compiled must fulfil an additional requirement with regards to their profitability:

- Positive EBITDA¹⁴ for the two most recent fiscal years as calculated by Refinitiv.

¹⁴ Field Code: 18198; Field Name: Earnings Before Interest, Tax and Depreciation (EBITDA).

In case the shares of a newly listed company result from conversion of the shares tendered for exchange of two or more companies that cease to exist (i.e., Merger of companies), the Order Book Volumes of the companies are aggregated, provided that they were listed on the FWB® Frankfurt Stock Exchange, in one of the transparency standards, prior to the merger. A requirement for aggregating Order Book Volumes is that the companies that no longer exist are delisted from active trading status on any stock exchange. The Order Book Volumes are aggregated retroactively at this point.

Inclusion in the Ranking List

There are two different Ranking Lists, one for DAX®, MDAX®, SDAX® and one for TecDAX®, each with ranks starting at 1.

All of the share classes listed on Regulated Market of FWB® Frankfurt Stock Exchange are listed on the ranking list for DAX®, MDAX®, SDAX®. A ranking is given to the share classes that meet the basic criteria according to section 4.1.1.1. Companies that are first listed at FWB® Frankfurt Stock Exchange have additionally to be listed for a minimum of at least 30 trading days. Classes that do not meet the criteria given in section 4.1.1.1 are listed on the ranking list but do not receive a rank. Each ISIN under which shares in a company are traded is considered a separate class in this regard. If a company has several share classes, only the largest and most liquid share class is given a ranking, as measured by a combined metric of Market Capitalization and Order Book Volume. If the share classes are evaluated equally based on the metric created above, the most liquid one gets a rank.

If subscription rights issued as part of a capital increase are of value on the date of creating the ranking list, the market capitalization shown on the ranking list will be determined in consideration of the capital increase. In this case, an acceptance ratio of 100% is assumed. If the share capital at the end of the subscription period differs from this, the market capitalization will be adjusted accordingly.

The ranking list for TecDAX® exclusively contains companies that are defined within chapter 11.3 as "Tech". It is created in the same way as described above for DAX®, MDAX® and SDAX®.

Exclusion from Ranking

- 1) Companies that do not meet the necessary liquidity criteria for initial or continued eligibility are not ranked.
- 2) Companies for which there is a publicly available decision for revocation of admission by the Frankfurt Stock Exchange pursuant to the Stock Exchange Rules are not ranked.
- 3) To ensure that the composition of the indices reflects the market and/or economic reality which the indices aim to represent and to avoid that the application of the stated rules leads, in certain unforeseeable circumstances, to misrepresenting results, STOXX Ltd. reserves the right to exclude certain companies from being ranked on the ranking list (Discretionary Rule, see Section 1.3). An appropriate reason for such an exclusion may be, for example, the fact that it is a foreign company with the holding's headquarters in Germany but the focus of its business activity abroad (Discretionary Rule, see Section 1.3).

4.1.1.3 DAX®, MDAX®, SDAX®, TecDAX®: Application of the selection criteria

The index composition of DAX®, MDAX®, SDAX® and TecDAX® is reviewed quarterly based on the Fast Exit and Fast Entry rules and semi-annually based on the Regular Exit and Regular Entry rules.

The purpose of the review on the basis of the Fast Exit and Fast Entry rules is to account for significant changes in rankings. These changes may occur when companies no longer possess the required size (Free Float Market capitalization) which may arise due to large issues (e.g., major changes in the Free Float or a steep price drop) and should be taken into consideration promptly in the index.

The “Overview of rules” table shows when and how the rules detailed below apply.

Overview of rules¹⁵

<u>DAX®</u>	Candidate rank FF MCap¹⁶	Alternate candidate rank FF MCap	Mar	Jun	Sep	Dec
Fast Exit	60	47	X	X	X	X
Fast Entry	33	47	X	X	X	X
Regular Exit	53	47	X		X	
Regular Entry	40	47	X		X	
<u>MDAX®</u>	Candidate rank FF MCap	Alternate candidate rank FF MCap	Mar	Jun	Sep	Dec
Fast Exit	110	97	X	X	X	X
Fast Entry	83	97	X	X	X	X
Regular Exit	103	97	X		X	
Regular Entry	90	97	X		X	
<u>SDAX®</u>	Candidate rank FF MCap	Alternate candidate rank FF MCap	Mar	Jun	Sep	Dec
Fast Exit	180	167	X	X	X	X
Fast Entry	153	167	X	X	X	X
Regular Exit	173	167	X		X	
Regular Entry	160	167	X		X	
<u>TecDAX®</u>	Candidate rank FF MCap	Alternate candidate rank FF MCap	Mar	Jun	Sep	Dec
Fast Exit	45	35	X	X	X	X
Fast Entry	25	35	X	X	X	X

¹⁵ The “Overview of rules” table provides a simplified overview of the application of selection criteria. The precise application of the rankings can be seen in rules 1-4.

¹⁶ FF MCap: free float market capitalization

Regular Exit	40	35	X		X	
Regular Entry	30	35	X		X	

The selection of companies in the DAX®, MDAX®, SDAX® and TecDAX® indices is based on Free Float Market Capitalization. The currently valid ranking list always forms the basis for the application of the rules outlined below. The four rules are applied successively.

For selection to the DAX, not only must the free float market capitalization ranking of the company to be included or replaced meet the thresholds described in this section, but it must also meet the EBITDA criterion as outlined in 4.1.1.2. If a company would be eligible for inclusion in the DAX based on its free float market capitalization ranking, but does not meet the EBITDA criterion, the next ranked company in the ranking list that is meeting the EBITDA criterion will be considered for inclusion.

- 1) **Fast Exit:** A company in the selection index is replaced if it has a lesser rank than the 'candidate rank' in Free Float Market Capitalization (see the "Overview of rules" table; for example, greater than 60 in the Free Float Market Capitalization criterion in the DAX® ranks). It is replaced by the company with the highest Free Float Market Capitalization that has the corresponding ranking positions for the Free Float Market Capitalization in the 'alternate candidate rank' stated in the "Overview of rules" table for the respective selection index (e.g., smaller than or equal to 47 in the DAX® ranks). If there are no companies that meet these conditions, the company with the highest market cap rank is determined as successor.
- 2) **Fast Entry:** A company is included in the selection index if it has the same or better rank than the 'candidate rank' in the Free Float Market Capitalization (e.g., smaller than or equal to rank 33 for the Free Float Market Capitalization criterion in the DAX® ranks). The company with the lowest Free Float Market Capitalization that is ranked worse than the 'alternate candidate rank' is excluded (e.g., greater than 47 in the DAX® ranks). If there are no companies in the selection index that meet these criteria, the company with the lowest Free Float Market Capitalization is removed from the selection index.
- 3) **Regular Exit:** A company in the selection index will be replaced if it has a worse rank than the 'candidate rank' in Free Float Market Capitalization (for example, greater than 53 in the Free Float Market Capitalization in the DAX® ranks). It will be replaced by the company with the highest Free Float Market Capitalization that has the corresponding ranking positions for in the 'alternate candidate rank' stated in the "Overview of rules" table for the respective selection index (e.g., smaller than or equal to 47 in the DAX® ranks). Notwithstanding the previous sentences, if no successor can be determined, no change takes place.
- 4) **Regular Entry:** A company will be included in the selection index if it has the same or better rank than the 'candidate rank' in the Free Float Market Capitalization (e.g., smaller than or equal to rank 40 for the Free Float Market Capitalization in the DAX® ranks). The company with the lowest Free Float Market Capitalization that is ranked worse than the 'alternate candidate rank' will be

excluded (e.g., greater than 47 in the DAX® ranks). Notwithstanding the previous sentences, if no alternate candidate can be determined, no exchange takes place.

In exceptional cases, for example takeovers announced at short notice or significant changes in the free float, STOXX Ltd. may deviate from rules 1–4 mentioned above (Discretionary Rule, see Section 1.3).

Decisions regarding changes to the composition of the selection index are published after 10 p.m. CET on the third trading day in March, June, September, and December in a press release and online at <http://www.dax-indices.com>.

Actions in case of shortfalls or surpluses in the Selection Indices

A shortfall in the number of constituents may occur in the selection index during the index review. This may occur when a company no longer meets the basic criteria (see 4.1.1.1). An example would be a company publicly announcing the discontinuation of the Prime Standard listing. Remaining in the selection index is, therefore, no longer justified, however this will only take effect in the next regular review. In this case, the company would be removed during the regular review before the application of the four rules above. Consequently, there would be a shortfall in the selection index.

If a shortfall occurs during the regular review before the four rules of the selection indices are applied, it is assessed whether a relegation candidate from a superior index exists (e.g., a shortfall may occur in the SDAX® due to an exit from MDAX®, where the company is not added to SDAX but left without index membership, and the simultaneous promotion of an SDAX® company to MDAX). In this case, a review using the Regular Exit rule for the respective selection index will be performed for the exit candidate, reviewing the eligibility for acceptance into the subordinate selection index.

- a. If the company does not contravene the Regular Exit rule, the relegation candidate is directly accepted into the selection index in which the shortfall occurred.
- b. If the Regular Exit rule contravenes, the relegation candidate is not accepted directly into the selection index with the shortfall.
- c. If there are no other relegation candidates and a shortfall continues to exist in the selection index, this shortfall in the selection index is treated as a Fast Exit. Consequently, the Fast Exit rule of the respective selection index with the shortfall is applied. In this case, the company which caused the shortfall is considered the Fast Exit candidate. A company that, in turn, could be accepted into the selection index with the shortfall is found using the Fast Exit rule.

There is still the possibility for a constituents' surplus in the selection index. This may occur in case a company that so far had not been included in a selection index as it failed to meet the basis criteria (see 4.1.1.1) qualifies for the new index composition and replaces a company. An example of this would be if a company has only recently been listed (IPO). If two companies are exchanged and the example above or a similar situation applies, this may lead to a surplus in the subordinate selection index. If, for example, a recently listed company qualifies directly for the MDAX®, the replaced company could be included into the SDAX® and cause a surplus there.

If a company changes from a selection index into a subordinate selection index without a security from the subordinated selection index being promoted at the same time, this may lead to a surplus of companies (e.g., a recently listed company is promoted to the MDAX® following the regular review. At first the composition of the MDAX® is finalised. As soon as the review of the MDAX® is complete, the review of the exchanged candidate for acceptance into the SDAX® is carried out using the Regular Exit rule). In this case, a check using the Regular Exit rule for the respective selection index is performed for the exit candidate, reviewing the eligibility for acceptance into the subordinated selection index.

- a. If the company does not contravene the Regular Exit rule, the relegation candidate is directly accepted into the subordinated selection index.
- b. If the company contravenes the Regular Exit rule, the relegation candidate is not accepted directly into the subordinated selection index.
- c. If there are no other relegation candidates and there is still a surplus in the selection index, this surplus is treated as a Fast Entry. Consequently, the Fast Entry rule of the respective selection index is applied. In this case, the company that caused the surplus is considered as the Fast Entry candidate. A company that, in turn, could be removed from the selection index with the surplus is found using the Fast Entry rule.

The selection index is restored to the fixed number of companies before the four rules for the relevant selection index are applied (Fast Exit, Fast Entry, Regular Exit and Regular Entry). The aim of this is to ensure that the relevant selection index contains the designated number of companies before the review of the index is performed.

4.1.2 Scale 30 Index

The companies that are included in the Scale 30 Index must be listed in the Scale segment and trading on Xetra®. If this fundamental prerequisite is met, the 30 most liquid companies by Order Book Volume on Xetra® and Börse Frankfurt (in the preceding twelve months) are selected.

To prevent the largest companies from dominating the index, a 10% cap per component is applied. In the case of new inclusions to the index, the companies must have been listed in the Scale segment for at least 30 days (does not apply in case of change in transparency standard).

4.1.3 DAX ex Financials Index

DAX® ex Financials Index corresponds to the composition of the DAX® Index excluding the FIRE super sector (Finance, Insurance or Real Estate). It therefore contains the largest companies from the Regulated Market of FWB® Frankfurt Stock Exchange that do not belong to the FIRE super sector. The DAX® Index rules are crucial for inclusion in the index.

After determination of the composition of the DAX® Index, companies in the FIRE super sector are excluded. In addition, those companies that are classified under “section K” (Financials and Insurance) according to the Customer Classification of Deutsche Bundesbank as provided by WM Datenservice of WM Gruppe will be excluded from the provision of ranks. The composition of the index is reviewed on a quarterly basis, based on the changes to the DAX® Index. Changes to the sector classification that are leading to the affiliation of a company with “section K” are considered a breach

of the basic criteria for this index and the affected company is therefore removed from the index. STOXX Ltd. communicates this decision and removes the relevant company, usually two full trading days after the announcement (Discretionary Rule, see Section 1.3).

4.1.4 DAX ex Financials 30 Index

The DAX[®] ex Financials 30 Index is based on the DAX[®] Index ranking list and shows the blue chips permitted in the Regulated Market which are not classified as **Finance**, **Insurance** or **Real Estate** (FIRE). It therefore includes the 30 largest companies listed in the regulated market of FWB Frankfurt Stock Exchange, that do not belong to the FIRE super sector. The DAX[®] Index rules are crucial for inclusion in the index.

The DAX[®] ex Financials 30 Index ranking list is taken as a basis for the ordinary adjustment. It is created in the same way as the DAX[®] ranking list, except for the profitability criterion which does not apply; the basic criteria listed in section 4.1.1.1 apply; companies that belong to the FIRE super sector are excluded. In addition, companies classified under “section K” (Financials and Insurance) according to the Customer Classification of Deutsche Bundesbank as provided by WM Datenservice of WM Gruppe will be excluded from the provision of ranks. The 30 companies are then selected according to section 4.1.1.3, based on the Free Float Market Capitalization. Changes to the sector classification that are leading to the affiliation of a company with “section K” are considered as a breach of the basic criteria for this index and the affected company is therefore removed from the index. For the DAX[®] ex Financials 30 Index, the replacement is determined based on the Fast Exit rule. STOXX Ltd. communicates this decision and replaces the relevant company, usually two full trading days after the announcement (Discretionary Rule, see Section 1.3).

	Candidate rank FF MCap	Alternate candidate rank FF MCap	Mar	Jun	Sep	Dec
Fast Exit	45	35	X	X	X	X
Fast Entry	25	35	X	X	X	X
Regular Exit	40	35	X		X	
Regular Entry	30	35	X		X	

4.1.5 DAX 50 ESG

4.1.5.1 Basic Criteria

Only companies of the HDAX are eligible for inclusion in the DAX 50 ESG. This means that the basic criteria of section 4.1.1.1 are satisfied.

4.1.5.2 ESG Exclusion Criteria

The ESG exclusion criteria for excluding companies from the eligible universe are:

Global Standards Screening:

STOXX will exclude companies that are non-compliant based on the Sustainalytics Global Standards Screening assessment. Global Standards Screening identifies companies that violate or are at risk of

violating commonly accepted international norms and standards, enshrined in the United Nations Global Compact (UNGC) Principles, the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights (UNGPs), and their underlying conventions.

Controversial Weapons:

STOXX will exclude the companies that Sustainalytics identifies to be involved with controversial weapons. The following weapons are considered controversial: anti-personnel mines, biological and chemical weapons, cluster weapons, depleted uranium, nuclear weapons, and white phosphorus weapons.

The criteria for involvement are:

- Internal production or sale of controversial weapons
- The ultimate holding company owns >10% of voting rights of an involved company
- >10% of voting rights of a company is owned by the involved company

Tobacco:

STOXX will exclude companies that Sustainalytics identifies to have:

- >0% revenues from manufacturing tobacco products

Thermal Coal:

STOXX will exclude companies that Sustainalytics identifies to have:

- >5% revenues from thermal coal extraction (including thermal coal mining and exploration)
- >5% power generation capacity: coal-fired electricity, heat, or steam generation capacity / thermal coal electricity production (including utilities that own/operates coal-fired power plants).

Nuclear Power:

STOXX will exclude companies that Sustainalytics identifies as having:

- >5% revenues from nuclear power production:
 - Utilities that own/operate nuclear power generators
 - Note: in this category Sustainalytics tracks the percentage of a company's generating capacity that is based on nuclear power
- >5% revenues from nuclear power supporting products / services, including:
 - Design and construction of nuclear power plants
 - Design and manufacture of specialized parts for use in nuclear power plants, including steam generators, control rod drive mechanisms, reactor vessels, cooling systems, containment structures, fuel assemblies, and digital instrumentation and controls
 - Special services, such as the transport of nuclear power materials, and nuclear plant maintenance

- Uranium mining and exploration, including companies that mine uranium and convert, enrich, and fabricate
- >5% revenues from nuclear power distribution, including:
 - The resale or distribution of electricity generated from nuclear power
 - This applies to distributors, resellers and utilities that distribute nuclear power as a part of their energy mix

Note: In this category Sustainalytics tracks the percentage of a company's energy mix that is generated from nuclear power

Military Contracting:

STOXX will exclude companies that Sustainalytics identifies to have:

- >5% revenues from manufacturing military weapons systems and/or integral, tailor made components of these weapons
- >5% revenues from tailor made products and/or services that support military weapons

4.1.5.3 Equity Index Rankings for DAX 50 ESG

The selection of companies in the DAX® 50 ESG Index is based on the Free Float Market Capitalization¹⁷ and ESG performance¹⁸. The reporting date for the collection data is the last trading day of the month for which the ranking list is created. The DAX® 50 ESG Index ranking list will be created for the eligible securities and published monthly by STOXX Ltd.

Creating the Ranking List

To create the ranking list, the parameters relevant for the allocation of rank – Free Float Market Capitalization and ESG scores – are recorded and the basis criteria¹⁹ are checked on the recording date (last trading day of the month).

The Free Float Market Capitalization is determined in the same way as for the DAX Selection Indices, see 4.1.1.2 for details. The following applies to ESG score:

- In case of a missing ESG score for a company, an ESG score of zero is assigned to it.
- In case of missing Product Involvement data for a company, the company is not eligible

¹⁷ Free Float Market Capitalization as specified in the DAX Equity Guide, section 4.1.1.2

¹⁸ In case of two companies having same ESG Score, priority is given to the one with the highest FF MCap

¹⁹ As specified in the DAX Equity guide, section 4.1.1.1

4.1.5.4 DAX® 50 ESG: Application of the selection criteria

Like DAX Index, the index composition of DAX® 50 ESG Index is reviewed quarterly based on the Fast Exit and Fast Entry rules and semi-annually in March and September based on the Regular Exit and Regular Entry rules.

The “Overview of rules” table shows when and how the rules detailed below apply.

Overview of rules²¹

DAX® 50 ESG	Candidate rank FF MCap²⁰/ ESG	Alternate candidate rank FF MCap/ ESG	Mar	Jun	Sep	Dec
Fast Exit	75/75	60/60; 60/65; 60/70	X	X	X	X
Fast Entry	40/40	60/60	X	X	X	X
Regular Exit	70/70	60/60	X		X	
Regular Entry	50/50	60/60	X		X	

The selection of companies in the DAX® 50 ESG is based on the quantitative criteria of Free Float Market Capitalization and ESG Score. The currently valid ranking list for DAX 50 ESG always forms the basis for the application of the rules outlined below. The four rules are applied successively.

Fast Exit: A company in the selection index is replaced if it has a lesser rank than the ‘candidate rank’ in one of the two criteria of Free Float Market Capitalization or ESG score (see the “Overview of rules” table; for example, greater than 75 in the Free Float Market Capitalization criterion or greater than 75 in ESG criterion in the DAX® 50 ESG ranks). It is replaced by the company with the highest Free Float Market Capitalization that has the corresponding ranking positions for both criteria in the ‘alternate candidate rank’ stated in the “Overview of rules” table for the respective selection index (e.g., smaller than or equal to 60 in the DAX® 50 ESG ranks). If there are no companies that meet these conditions, the successor is determined by relaxing the ESG score criterion twice gradually, each time by five ranks (e.g., 60/65, then 60/70 in the DAX 50 ESG ranks). If there is still no company that meets the criteria, the company with an ESG rank of equal to or less than 60 which has the highest free float market capitalization is determined as the successor.

Fast Entry: A company is included in the selection index if it has the same or better rank than the ‘candidate rank’ in the two criteria: Free Float Market Capitalization and ESG (e.g., smaller than or equal to rank 40 for the Free Float Market Capitalization criterion, smaller than or equal to rank 40 in ESG criterion in the DAX® 50 ESG ranks). The company with the lowest Free Float Market Capitalization that is ranked worse than the ‘alternate candidate rank’ in one of the criteria is excluded (e.g., greater than 60 in one of the three criteria in the DAX® 50 ESG ranks). If there are no companies in the selection index that meet these criteria, the company with the lowest Free Float Market Capitalization is removed from the selection index.

²⁰ FF MCap: Free Float Market Capitalization

²¹ The “Overview of rules” table provides a simplified overview of the application of selection criteria. The precise application of the rankings can be seen in rules 1-4.

Regular Exit: A company in the selection index will be replaced if it has a worse rank than the 'candidate rank' in one of the two criteria of Free Float Market Capitalization or ESG (for example, greater than 70 in the Free Float Market Capitalization criterion or greater than 70 in the ESG criterion in the DAX® 50 ESG ranks). It will be replaced by the company with the highest Free Float Market Capitalization that has the corresponding ranking positions for the two criteria in the 'alternate candidate rank' stated in the "Overview of rules" table for the respective selection index (e.g., smaller than or equal to 60 in the DAX® 50 ESG ranks). Notwithstanding the previous sentences, if no successor can be determined, no change takes place.

Regular Entry: A company will be included in the selection index if it has the same or better rank than the 'candidate rank' in the two criteria: Free Float Market Capitalization and ESG score criteria (e.g., smaller than or equal to rank 50 for the Free Float Market Capitalization criterion and smaller than or equal to rank 50 in the order ESG criterion in the DAX® 50 ESG ranks). The company with the lowest Free Float Market Capitalization that is ranked worse than the 'alternate candidate rank' in one of the two criteria will be excluded (e.g., greater than 60 in one of the two criteria in the DAX® 50 ESG ranks).

Notwithstanding the previous sentences, if no alternate candidate can be determined, no exchange takes place.

Decisions regarding changes to the composition of the DAX 50 ESG index are published after 10 p.m. CET on the fourth trading day in March, June, September, and December at <http://www.qontigo.com>.

Actions in case of shortfalls in the DAX 50 ESG

A shortfall in the number of constituents may occur in the DAX 50 ESG index during the index review. This may occur when a company is no longer part of the HDAX. An example would be a company been deleted from the HDAX in the upcoming review. Remaining in the selection index is, therefore, no longer justified, however this will only take effect in the next regular review. In this case, the company would be removed during the regular review before the application of the four rules above. Consequently, there would be a shortfall in the selection index.

In this case a review using the Regular Exit rule will be performed for the company which caused the shortfall, and the following process is applied in order to review the eligibility for acceptance of the alternate candidate into the index.

- a) If the company does not contravene the Regular Exit rule, the alternate candidate is directly accepted into the selection index.
- b) If the Regular Exit rule contravenes, the alternate candidate is not accepted directly into the selection index.
- c) If there are no other alternate candidates and a shortfall continues to exist in the selection index, this shortfall in the selection index is treated as a Fast Exit. Consequently, the Fast Exit rule of the selection index with the shortfall is applied. In this case, the company which caused the shortfall is considered the Fast Exit candidate. A company that, in turn, could be accepted into the selection index with the shortfall is found using the Fast Exit rule.

The index is restored to the fixed number of companies before the four rules for the relevant selection index are applied (Fast Exit, Fast Entry, Regular Exit and Regular Entry). The aim of this is to ensure that the relevant selection index contains the designated number of companies before the review of the index is performed.

A surplus in the DAX 50 ESG index is not possible.

4.2 All Share Indices

All Share Indices include all companies listed in the market segment in question. These are Prime All Share, Technology All Share, Classic All Share®, General All Share, Scale All Share and CDAX®.

4.2.1 Addition

A new share class included in the Prime Standard, General Standard or Scale segments of FWB® Frankfurt Stock Exchange is included in the corresponding All Share Index. A distinction is made between two cases:

- a) A share class is listed on FWB® Frankfurt Stock Exchange for the first time. In this case, the company will be included on the index on the day after it is first listed.
- b) A share class comes from another segment of FWB® Frankfurt Stock Exchange. The share class is included in the index on the day of the first quotation in the new segment.

4.2.2 Deletion

Deletions from the All-Share indices are performed after the close of trading at the company's last listing day in the segment.

4.3 Sector Indices

4.3.1 DAX Sector Indices

Sector indices include all companies listed in the respective sector. In general, index adjustments take place in sector indices in the event of a sector change due to an annual review or extraordinary changes of the sector classification as described in chapter 2.11.

4.3.1.1 Addition

A new share class included in the Prime Standard of the FWB® Frankfurt Stock Exchange is included in the corresponding DAX Sector Index. A distinction is made between two cases:

- a) A share class is listed on the FWB® Frankfurt Stock Exchange for the first time. In this case, the share class is included in the index on the day after it is first listed.
- b) A share class comes from another segment of the FWB® Frankfurt Stock Exchange. The share class is included in the index on the day of the first quotation in the new segment.

4.3.1.2 Deletion

Deletions from the Prime Standard segment will lead to a deletion from the relevant DAX sector Index and are performed after the close of the market on the day on which the company was last listed in the segment.

4.3.2 DAX Sector All Share Indices

Sector indices include all companies listed in the respective sector. In general, index adjustments take place in sector indices in the event of a sector change due to an annual review or extraordinary changes of the sector classification as described in chapter 2.11.

4.3.2.1 Addition

A new share class included in the regulated market of the FWB® Frankfurt Stock Exchange is included in the corresponding DAX Sector All Share Index. A distinction is made between two cases:

- c) A share class is listed on the FWB® Frankfurt Stock Exchange for the first time. In this case, the share class is included in the index on the day after it is first listed.
- d) A share class comes from another segment of the FWB® Frankfurt Stock Exchange. The share class is included in the index on the day of the first quotation in the new segment.

4.3.2.2 Deletion

A revocation of listing from FWB Frankfurt Stock Exchange of a share class will result in a deletion from the relevant DAX Sector All Share Index and is performed after the close of the market on the day on which the share class was last listed on FWB Frankfurt Stock Exchange.

5 Extraordinary Index Review

5.1 Selection Indices

Notwithstanding the rules outlined in section 4.1 on ordinary adjustment, extraordinary changes to the composition must be made if the events described below take place.

A successor is selected based on the currently applicable, i.e., most recently published, ranking list and the rules for an ordinary adjustment in section 4.1.1. The changes in principle take place after the announcement with a notice period of two trading days.

5.1.1 Insolvency of Companies

“Insolvency Proceeding” shall refer to any applicable insolvency, bankruptcy, dissolution, liquidation or winding up proceedings or similar proceedings in relation to the assets of such Constituent. An “Insolvency Event” in relation to a company which is a constituent of an equity index (“Constituent”) shall be deemed to have occurred if STOXX has been informed by the Constituent, or a national competent authority, or a court in writing or through public announcement (other than by entry into a register) that

- (i) Insolvency Proceedings over the assets of the Constituent will be filed or have been filed for, or
- (ii) that Insolvency Proceedings have been opened in relation to the Constituent, or
- (iii) the Constituent seeks or becomes subject to the appointment of an administrator, receiver, trustee, custodian, or other similar official for it or for all or substantially all its assets, or
- (iv) the Insolvency Proceedings are rejected due to a lack of assets, or
- (v) Constituent is in liquidation, be it as a result of Insolvency Proceedings or a shareholders' decision or otherwise.

For the avoidance of doubt, a resolution and/or restructuring measures under the European Bank Recovery and Resolution Directive (or comparable third country legislation which stipulate that banks shall be subject to an extraordinary restructuring proceeding) shall not be considered as Insolvency Events.

If an Insolvency Event occurred in relation to a Constituent, the securities of the Constituent shall be deleted from the index based on the traded stock price on its primary market, if available; if the last price is not available, the Constituent will be deleted at market close in local currency of 0.001.

The Constituent shall be extraordinarily replaced in the Indices. Such replacement shall be announced at 22:00 CET on the day STOXX became aware of the Insolvency Event based on publicly available information. The change shall be implemented two (2) trading days after the calendar day of the announcement by STOXX and shall become effective the next trading day after implementation. In case such security has already been announced as a new index constituent or replacement for a current index constituent, the announcement will be revoked, and a new constituent implemented with two (2) trading days' notice. This may lead to an index with less constituents than required by the index methodology until a replacement is effective.

The securities of a Constituent for which an Insolvency Event occurred are not eligible as an index constituent or replacement index constituent for any future selection, with immediate effect at the date of STOXX' announcement. The respective securities will be kept on the monthly index ranking list without receiving a rank.

The respective securities may receive a rank again once the proceedings in relation to the Insolvency Event have been concluded resulting in the continuance of the business operated by the issuer of the security, but not earlier than one (1) calendar year after exclusion became effective.

5.1.2 Breach of the Basic Criteria

Companies no longer meeting the basic criteria necessary in order to remain in the index as described in Section 4.1.1.1, are removed from the index, where the type of basic criteria the company is breaching determines the timing of the removal.

A breach of one of the following basic criteria leads to an exclusion from the index with 2-days' notice from the date that STOXX becomes aware of the breach:

- minimum free float
- listing on Regulated Market of FWB
- continuous trading
- Timely publication of the audited Annual Financial Report

- Timely publication of the half-yearly Financial Report
- Timely publication of the Quarterly Statement or Quarterly Financial Report.

A breach of the timely reporting requirement is given if a company fails to publish after the added grace period:

- the Annual Financial Report within 4 months from the end of the relevant reporting period
- the Half-yearly Financial Report within 3 months from the end of the relevant reporting period
- the Quarterly Statement or Quarterly Financial Report within 75 days from the end of the relevant reporting period

The withdrawal of the required financial reporting or of their audit, when required, after the aforementioned terms is considered equivalent to a breach of the timely reporting requirement.

A company in breach of the required financial reporting criteria will remain on the existing Ranking List until the end of the current month, but it will not be eligible for index membership.

If a company succeeds in publishing the required financial reporting after its exclusion from the indices, it can be ranked on the upcoming Ranking List again, provided it fulfils the necessary criteria.

For all aforementioned cases of breaches, the standard notice period of 2 trading days will be extended such that the effective date does not conflict with the monthly Ranking List cut-off date (t) and publication dates or the review implementation process. The effective date of an extraordinary index change would be modified as follows:

- On any month: An ad-hoc correction that would be effective after t and before t+6 is postponed being effective on t+6 based on the Ranking List published on t+3.
- On review months only: An ad-hoc correction that would be effective after the Thursday prior to the 2nd Friday and before the review effective day is postponed so to become effective on the review effective day.
- Any information received on the review implementation day or the preceding day is processed to be effective on the 2nd or the 1st trading day after the review effective day.

Compliance with the basic criteria of adherence to the required recommendations of German Corporate Governance Code or minimum liquidity is monitored on a monthly basis as part of the Ranking List creation process. A breach of these criteria will leave the respective company without a rank on the relevant monthly Ranking List and until next index review. The company will then be removed from the index during the index review process.

In all aforementioned cases, for DAX, MDAX, SDAX, TecDAX, DAX ex Financials 30 and DAX 50 ESG the company in breach is replaced by applying the Fast Exit rule. In all other selection indices, the replacement is determined based on the criteria described in Section 4.1. STOXX Ltd. communicates this decision and replaces the relevant company, usually two full trading days after the announcement (Discretionary Rule, see Section 1.3). In justified cases (e.g., in the event of the inclusion of the acquiring company in the index), the replacement can be delayed by up to ten trading days (Discretionary Rule, see Section 1.3). Where non-compliance with these rules on a future

date is already certain, the relevant company may be replaced as early as on the next chaining date (Discretionary Rule, see Section 1.3).

5.1.3 Conversion of Preferred Shares into Ordinary Shares

a) Ordinary shares are already included in the index

No chaining is carried out. The number of shares remains unchanged until the next chaining date.

b) Preferred shares are already included in the index

The ordinary shares are included in the index, taking the place of the preferred shares. The number of ordinary shares and the free float factor are adopted from the class of the preferred shares and are subject to adjustment only on the next regular chaining date. If the conversion occurs in the ratio 1:1, no further amendments will be carried out. In all other cases the mathematical price difference will be balanced by the ci factor.

5.1.4 Extraordinary Free Float Adjustments

If the free float factor of a company included in a selection index changes by more than 10 percentage points during the period between two regular chaining dates due to a corporate action (e.g., subscription right or changes in share capital), the free float factor will be updated extraordinarily. The rule does not apply to cases where the absolute change of free float-adjusted number of shares ($ff_{iT} \times q_{iT}$) before the ex-date of the corporate action is less than or equal to 10%, i.e., the corporate action is deemed market cap neutral. STOXX Ltd. will announce the new free float factor at least two trading days before the change becomes effective.

Free float adjustments resulting from ongoing acquisitions (acquisitions as defined by the German Securities Acquisition and Takeover Act (WpÜG)) will be made extraordinarily in the respective index after the initial announcement and the final announcement at the end of each offer period or after the tender offer cancellation. Index changes will be announced two trading days before the change becomes effective. Shares held in fixed ownership will remain unchanged until further information, i.e., according to the WPHG or other official sources, is available.

The extraordinary adjustment in each case will be carried out as described in section 7.2.2, with the only difference that the index composition will not be changed and only the free float factor of the affected company will be updated.

5.1.5 Adjustments in the Case of Mergers and Acquisitions

Two possible scenarios must be distinguished in this context:

a) The absorbing or emerging company meets the basic criteria for inclusion in the index

As soon as the free float of the absorbed company falls below 10 percent, the company is removed from the index. The absorbed company is replaced by the absorbing or emerging company on the same date.

Generally, the absorbed company is deleted at the last traded price of the company. If the absorbed company is not trading anymore (delisted or suspended before its deletion), a new

artificial price based on the acquisition/merger terms is calculated and the absorbed company is kept/deleted with this price instead of the last traded one. For the calculation of the artificial price only ordinary cash and stock terms will be used. Other instruments such as Contingent Value Rights will not be considered.

Payment Type	Artificial Price
Cash	Deletion Price = Cash term
Stock	Deletion Price = Close price acquirer*Stock term
Cash and Stock	Deletion Price = Cash term + Close price acquirer*Stock term
Cash or Stock	Deletion Price = Cash term

b) The absorbing company is already included in the index or does not meet the basic criteria for inclusion in the index

As soon as the free float of the absorbed company falls below 10 percent, the company is removed from the index. On the same date the absorbed company is replaced by a new company. According to rules outlined in 5.1.2.

5.1.6 Conversion into Tendered Shares

During the period of a takeover bid or mandatory offer the target company shares tendered for exchange shall be treated as follows:

Where the target company is a component of one of the selection indices and the acceptance rate as shown in the notification pursuant to § 23 I WpÜG is greater than 50% ("acceptance threshold") then the shares in a target company included in an index shall be replaced by the shares tendered for conversion without chaining, if the following requirements are met:

- It can be assumed on the basis of the information publicly available at the time the acceptance threshold is exceeded, that the shares into which the target company shares tendered for exchange would be converted in the event of a successful takeover, satisfy the criteria for obtain a ranking, as described in Chapter 4.1.1.2. In this respect, for the purposes of making the required predictive decision it is irrelevant whether the bidder's shares (into which the target company shares tendered for exchange could be converted in the event of a successful takeover) already exist prior to the conclusion of the takeover offer, still need to be created, or are already traded on Xetra®. In the context of compliance with the basic criteria regarding the recommendations of the German Corporate Governance Codex (GCGC) and the accounting obligations according to section 4.1.1.1, it is assumed that the terms and conditions of the parent company will be adopted by the company to which the

tender offer will lead, by the end of the financial year following the successful completion of the merger.

- The bidder resp. the company resulting from the takeover is not already included in a selection index.

The shares tendered for exchange and the other shares not tendered for exchange each form a separate class of shares. If the aforementioned conditions are met, then the number of shares and the free float factor of the class to be replaced shall be adopted and modified only when the next regular chaining takes place.

If the takeover bid or mandatory offer fails, then the shares tendered for exchange shall be removed from the index without chaining and replaced by the shares that were previously included in the index.

5.1.7 Breach of Severe ESG Controversy Rating

In case a company which is an index constituent increases in its ESG Controversy Rating to Category 5 and becomes non-compliant based on the Sustainalytics Global Standards Screening assessment, the respective constituent will be deleted from the DAX® 50 ESG. The deletion will take place two dissemination days after the announcement, i.e., at the open of the 3rd dissemination day. A successor will be selected based on the Fast Exit rule. The replacement will be based on the most recently published DAX® 50 ESG ranking list.

5.2 All Share Indices

Mergers of companies result in an extraordinary adjustment to the All-Share indices. The acquired companies are deleted if they are no longer listed on the stock exchange and chaining takes place. If the new company is not created from the continuation of the listing of an old company, it is included on the index as a completely new company.

5.3 International Indices

5.3.1 Insolvency of Companies

Constituents subject to Insolvency Events are deleted and replaced pursuant to the provisions in section 5.1.1 of the Guide to the DAX Equity Indices.

6 Calculation

6.1 Index Formulas

6.1.1 Index Formula for free float market capitalization weighted indices

The selection indices of the DAX® family are capital weighted. Only the shares in the free float are considered when calculating the capitalization. The indices are each calculated as price and performance indices.

The indices in the DAX® family use the Laspeyres index formula and are calculated as follows:

$$\text{Index}_t = K_T \cdot \frac{\sum p_{it} \cdot \text{ff}_{iT} \cdot q_{iT} \cdot c_{it}}{\sum p_{i0} \cdot q_{i0}} \cdot \text{Base}$$

whereby:

c_{it}	=	Adjustment factor of company i at time t
ff_{iT}	=	Free float factor of share class i at time T
n	=	Number of shares in the index
p_{i0}	=	Closing price of share i on the trading day before the first inclusion in the index
p_{it}	=	Price of share i at time t
q_{i0}	=	Number of shares of company i on the trading day before the first inclusion in the index
q_{iT}	=	Number of shares of company i at time T
t	=	calculation time of the index
K_T	=	Index-specific chaining factor valid as of chaining date T
T	=	Date of the last chaining
Base	=	value of the index at base date

The formula set out below is equivalent in analytic terms, but designed to achieve relative weightings:

$$\text{Index}_t = \frac{\sum_{i=1}^n p_{it} \cdot (K_T \cdot \frac{ff_{iT} \cdot q_{iT}}{\sum_{i=1}^n q_{i0}} \cdot 100 \cdot c_{it})}{\frac{\sum_{i=1}^n p_{i0} \cdot q_{i0} \cdot 100}{\sum_{i=1}^n q_{i0}}} \cdot \text{Basis} = \frac{\sum_{i=1}^n p_{it} \cdot F_i}{A} \cdot \text{Basis}$$

whereby: $A = \frac{\sum_{i=1}^n p_{i0} \cdot q_{i0} \cdot 100}{\sum_{i=1}^n q_{i0}}$

and: $F_i = K_T \cdot \frac{ff_{iT} \cdot q_{iT}}{\sum_{i=1}^n q_{i0}} \cdot 100 \cdot c_{it}$

The index calculation can be reproduced in simplified terms by using the expression F_i :

- Multiply the current price by the respective F_i weighting factor;
- Take the sum of these products; and
- Divide this by the base value (A), which remains constant until the index composition is modified.

The F_i factors provide information on the number of shares required from each company to track the underlying index portfolio.

6.1.2 Index Formula for Market Cap-Weighted Indices

The same index formula as described under 6.1.1 is used for indices that are not weighted by Free Float Market Capitalization, but by full market capitalization, with the difference that:

$$ff_{iT} = 1$$

6.1.3 Index Formula for Equally Weighted Indices

The same index formula as described under 6.1.1 is used for equally weighted indices, such as the Scale All Share, with the difference that:

$$ff_{iT} = 1$$

$$q_{i0} = \text{Weighting factor of company } i \text{ on the trading day before the first inclusion in the Scale All Share Index}$$

$$q_{iT} = \text{Weighting factor of company } i \text{ at time } T$$

6.1.4 Specifics of Derived Indices

Indices for which another index forms the base universe, e.g., Dax[®] ex Financials, are designated as derived indices. Companies are selected from this base universe using a certain selection algorithm. As the selection algorithm should represent the only difference from the main index, the index weighting and the capping are not newly defined but are adopted from the parameters of the main index. For that reason, the capping factors of the main index are used unchanged for the derived index.

6.2 Index Formula for X-Indices

6.2.1 Calculation of X-DAX

The factor applied to discount the DAX[®] future (FDAX) will be deducted from the daily deviation of the index future from its underlying index (DAX[®]).

The X-DAX[®] is calculated as follows:

$$\text{Index}_t = \frac{1}{D_t} \text{FDAX}_t$$

Where:

$$D_t = \frac{\sum_{i=1}^N \frac{\text{FDAX}_i}{\text{DAX}_i}}{N}$$

Here, $\sum_{i=1}^N \frac{\text{FDAX}_i}{\text{DAX}_i}$ is the sum of all ratios $i=1$ to N of the future and index values measured on a given index calculation date t between the start of the DAX[®] and 5:15 pm CET.

To prevent distortions due to outliers, the lower and upper deciles of the ratios $\frac{\text{FDAX}_i}{\text{DAX}_i}$ are not considered in the following calculations and N is reduced accordingly.

D_t is then used to calculate the X-DAX[®] between 5:30 pm CET and 10:15 pm CET on date t .

To calculate the X-DAX[®] between 8:00 am CET and the start of the DAX[®] on the next calculation date ($t+1$), the discount factor (D_t) is adjusted downwards to take account of the decrease in the time to maturity.

With T_t being the time to maturity on date t and r_t an implicit interest rate, the X-DAX[®] calculation between 8:00 am CET and the start of the DAX[®] on date $t+1$ is carried out as follows:

$$D_{t+1} = 1 + r_t \frac{T_{t+1}}{360}, \text{ with } r_t = (D_t - 1) \frac{360}{T_t}$$

$$\text{Index}_t = \frac{1}{D_{t+1}} \text{FDAX}_t$$

6.2.2 Calculation of X-MDAX and X-TecDAX

X-MDAX[®] and X-TecDAX[®] are calculated based on F2MX and FTDX future prices as follows:

$$\text{Index}_t^j = \frac{1}{1 + r_t \cdot \frac{T_{F,t}}{360}} \cdot \text{Futures}_t^F$$

Where:

j = Index j stands for the respective index, X-MDAX[®] or X-TecDAX[®]

Futures_t^F = Last price of future F (F2MX or FTDX) on index j with the shortest time to maturity

$T_{F,t}$ = Number of days to maturity of future F at time t

r_t = Risk-free interest rate at time t

t = Time of calculation

The risk-free interest rate is derived by interpolation from the rates for unsecured money market transactions (€STR²², Euribor) as described below:

$$r_t = r_k \frac{T_{k+1} - T_{F,t}}{T_{k+1} - T_k} + r_{k+1} \frac{T_{F,t} - T_k}{T_{k+1} - T_k}, \text{ where } T_k \leq T_{F,t} \leq T_{k+1}$$

Where:

T_k, T_{k+1} = Number of days in the respective class

$T_{F,t}$ = Number of days to maturity of future F at time t

k = Classes (€STR, 1-, 3-, 6-months Euribor)

t = Time of calculation

The number of days to the maturity of the respective future F ($T_{F,t}$) is determined daily after close of calculation of the indices. It is calculated as the difference between the maturity date and the current date. It is constant for the entire trading day.

6.3 Calculation Details

6.3.1 Basis of Calculation

The equity indices use prices from most recent transactions from Xetra® for all DAX indices wherever possible. For any deviations of this principle such as in the case of incidents where it is not possible to obtain observable bona fide, arms-length, transactions for a specific index (e.g., in case of market disruptions) the governance process outlined in Section 1.3 should be followed for approval of such deviations.

6.3.2 Daily Settlement Indices

For DAX®, MDAX®, TecDAX® and DAX® 50 ESG an option settlement index is calculated once a day, using the prices determined in the course of the midday intra-day auction on Xetra®. If no price results from the midday intra-day auction for a company, the next price available is used. In the event that a current price is not available by the end of the calculation period, the last price available is used for calculation.

On chaining days, a future settlement index is calculated analogously.

6.3.3 Currency Conversion

The indices are available in the currencies set forth in the Vendor Code Sheet which is available on the DAX website www.dax-indices.com/resources. Selected indices (DAX®, HDAX® and DAX® 50 ESG)

²² Interpolation uses the latest available €STR value as provided by Refinitiv

are calculated in non-EUR currencies. The intraday currency conversion is based on the spot rates provided by Refinitiv, previously Financial and Risk business of Thomson Reuters. The WM/Reuters currency fixing rates from 5:00 pm CET are used to calculate the indices' closing values.

6.3.3.1 Currency Conversion with time lag

For DAX JPY TTM the currency conversion is based on the TTM (Telegraphic Transfer Middle rate) spot rates also provided by Refinitiv. The TTM JPY rate is published end of day Japan time, hence it is available in the morning CET time. For this reason previous day's DAX index value is used in the calculation and disseminated at close of calculation day.

The index value is calculated as follows:

$$I_t = I_{t_0} \cdot \frac{U_{t-1}}{U_{t_0-1}} \cdot \frac{FX_t}{FX_{t_0}}$$

Where:

I_t	The index value at day t
FX_t	The Reuters TTM rate at day t, defined as "EURTTM=BTMJ"(t)
U_{t-1}	The index value of the underlying index on day t-1, as defined in the table below.
t_0	The index base date
I_{t_0}	The index base value
U_{t_0-1}	The underlying index value on the day before the base date, set to the value of 100
FX_{t_0}	The Reuters TTM rate at base date, set to the value of 100.53

6.3.4 Prices Used, Calculation Frequency and Start

Index calculation is performed on every trading day of FWB® Frankfurt Stock Exchange, using prices traded on Deutsche Börse's electronic trading systems Xetra® or Börse Frankfurt whereby the last determined prices are used.

The various performance indices are calculated continuously during the day, whereas computation of the price indices is carried out once a day, at the close of trading.

The price and performance indices of the subsector and subsector All indices are calculated daily at close of trading.

A daily settlement price is calculated once a day for each index involved (on the basis of intra-day midday auction prices) as soon as all prices for the component issues of the respective index are available.

The selection indices (calculated once a second or once a minute) are published as soon as current prices are available for a minimum number of companies belonging to the respective indices. The calculation of the blue-chip index DAX[®] starts as soon as prices for all companies are available that are currently in the index, latest at 9:06 am. If no opening prices for individual companies are available, the respective closing prices of the previous day are used instead to calculate the indices. The minimum number required for the calculation of the respective indices can be found in the following table.

	Minimum Number of Companies/ Start Time	Total Number of Companies	Calculation of Daily Settlement Price
DAX ^{®23}	40 ²⁴ / 9:06 am	40	Yes
MDAX [®]	38 ²⁴	50	Yes
SDAX [®]	55	70	No
TecDAX [®]	20	30	Yes
HDAX [®]	75	Variable	No
DAX [®] ex Financials ²³	- / 9:06 am	Variable	Yes
DAX [®] ex Financials 30	30 / 9:06 am	30	Yes

In the event of a suspension during trading hours, the last price determined before such a suspension is used for all subsequent computations. If such suspension occurs before the start of trading, the closing price of the previous day is used instead. The closing index level is calculated using the respective closing prices (or last prices) established on Xetra[®] or Börse Frankfurt

6.3.5 Computational Accuracy

The K_t chaining factors are used and published as figures rounded to seven decimal places.

The c_{it} adjustment factors are included in the index formula, expressed in six decimal places. In the event of several adjustment events coinciding, such as “ex-dividend” and “ex subscription right” markdowns on the same day, only one single adjustment factor (six decimal places) is computed using the total markdown. Where several adjustment events are required for a single share but at different times, the factors rounded in such a way are multiplied by each other, and the product is rounded to six decimal places again.

When determining the c_{it} adjustment factor for subscription rights, the rights value is used rounded to two decimal places. Only in the case of a capital increase using company reserves will such a rights

²³ The actual number depends on the current number of companies in the index. Hence opening prices need to be available for all companies that are currently included in the index.

²⁴ Starting from the effective implementation date of the September index review on the September 20th, 2021

value not be rounded. If a dividend disadvantage has to be prorated (e.g., for three months), the value of such a disadvantage used for index calculation is rounded to two decimal places.

The free float factors are used as figures rounded to four decimal places.

The indices are rounded to two decimal places and published accordingly. The F_i factors are rounded to five decimal places and published accordingly, changing with each share-specific adjustment. If a dividend disadvantage has to be prorated, the value of such a disadvantage used for index calculation is rounded to two decimal places.

6.3.6 Index Flags and Corrections

An index is published with the label "A" ("amtlich") once the opening criteria are fulfilled. Where the opening criteria have not been met for an index on a certain trading day, an index value is derived from the last available prices at the end of the calculation period. Accordingly, this index is labelled "I" (indicative). If the number of corresponding securities is between the minimum number and the total number shown in the table, the indices are also labelled "R" (representative).

Subsequent index ticks are continuously checked for its deviation. Once an index specific threshold is breached, the corresponding index ticks are disseminated with an index supplement "U" (for unchecked, instead of "A" for amtlich) and an immediate operational check is triggered. If the deviation was justified (e.g., due to market conditions), the index will manually be switched back to "A", i.e., labelled in line with its corresponding status.

6.4 Calculation Correction

This section outlines the rules and procedures applicable in case of a calculation error, meaning the provision of index values, usage of index constituents or other elements or the application of weightings, capping, or other aspects of the index methodology in a manner that is not in line with this index methodology, e.g., due to a mistake, incorrect input data, etc.

6.4.1 Rule-based Correction

STOXX Ltd. corrects a Calculation Error without delay on the dissemination day it occurred, provided that STOXX Ltd. becomes aware of such Calculation Error before 15:30 CET of that dissemination day and insofar as technically and operationally feasible. STOXX Ltd. does not change intraday index composition of an index.

If STOXX Ltd. became aware of a Calculation Error at or after 15:30 CET, STOXX Ltd. aims at correcting the Calculation Errors as of the end of the next dissemination day, including corrections to index constituents.

STOXX Ltd. amends without undue delay previous incorrect index values or input data only if they are required for the subsequent index values calculation. Incorrect real-time index values disseminated before the effective time of the correction are not restated.

6.4.2 Non-rule-based Correction

If the above-outlined rule-based error correction cannot be applied, the relevant STOXX Committee assesses without undue delay:

- if and how the Calculation Error should be corrected, including if the index shall be restated, and/or
- if the dissemination of index values shall be suspended (Discretionary Rule, see Section 1.3).

An index should be restated, when the performance of the index (other than Selection Indices) can no longer be replicated. A suspension of index dissemination is triggered when the relevant STOXX Committee decides that the correction will take significant time during which misleading index values could lead to financial, legal, and reputational risks (Discretionary Rule, see Section 1.3).

STOXX Ltd. suspends the dissemination of an index at the latest at the end of the dissemination day after it became aware of a Calculation Error, if the Calculation Error has not been corrected by then.

STOXX Ltd. will resume the dissemination of the index as soon as the correct index calculation is feasible, and the correct historical values are available.

6.4.3 Notifications

In general, notifications take the form of an announcement on the DAX website (<http://www.dax-indices.com>). Announcements can (but need not, depending on the decision of STOXX Ltd.) be published via relevant financial media.

With regard to Calculation Errors, STOXX Ltd. issues notifications in accordance with the following rules:

- STOXX Ltd. will publish a notification before correcting a Calculation Error. Notifications are effective immediately following their issuance, unless otherwise specified in the notification.
- The notification will specify if a Calculation Error will be corrected retrospectively. In case of retrospective correction, STOXX Ltd. will publish the notification using the new end of day closing price.
- If STOXX Ltd. decides under Section 6.4.2 that index dissemination is suspended until the Calculation Error is corrected, a resume notification is published specifying the point in time when index dissemination is resumed, and the correction will take place.

STOXX Ltd. will refrain from the issuance of a notification if it reaches the view that the issuance of a notification is not in line with the applicable laws and may decide to issue such notification at a later point in time when such reasons have lapsed (Discretionary Rule, see Section 1.3). By reason of force majeure or other events beyond the control of STOXX Ltd. it might become impossible for STOXX Ltd. to issue a notification in due time or by the means set out herein. In such cases STOXX Ltd. may exceptionally issue the notification either subsequently immediately following such event or in any case by other means (Discretionary Rule, see Section 1.3).

7 Chaining

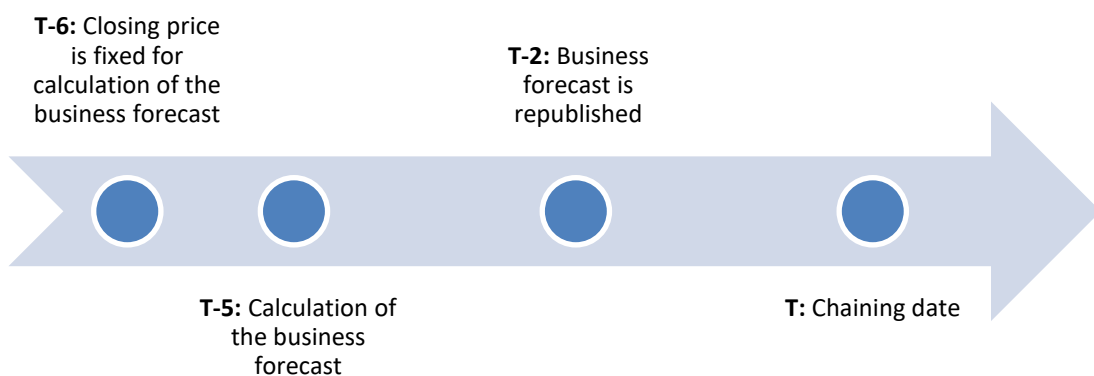

Quarterly chaining is carried out on the respective third Friday in March, June, September, and December. The index is calculated on this day using the weights applicable up to that point for the last time. The new weights will apply from the next trading day.

7.1 Business Forecast

The business forecast is published at the quarterly underlying data announcement date, five trading days before the chaining date (i.e. at the second Friday in March, June, September, and December). It contains the constituents weightings and cap factors for the new index compositions effective from the trading day following the third Friday of a review month.

The new number of shares, free float factors and closing prices used to determine the constituents weightings and cap factors are fixed at the trading day prior to the quarterly underlying data announcement date (T-6). For this purpose, the C_{it} adjustment factors are set to 1.

The business forecast will be republished on the Wednesday before the chaining date (T-2), taking into account all corporate actions with ex-dates effective during the period between the quarterly underlying data announcement date and the chaining date (including delistings and IPOs) STOXX became aware of since the initial publication of the business forecast at the quarterly underlying data announcement date.

7.2 Chaining for Free Float Market Cap-Weighted Indices

The portion of share capital attributable to each share class that is deemed free float (see section 2.3) is used for weighting free float market cap-weighted indices. The number of shares comprising the share capital and the free float factor are updated quarterly during the regular chaining process.

7.2.1 Regular Chaining

The quarterly chaining procedure is carried out quarterly and encompasses (with the exception of the Scale All Share Index) the following measures:

- Regular changes to the composition of the various indices are implemented.
- The number of shares and the respective free float factors are updated in accordance with the capital changes carried out.
- The accumulated income from distributions and capital changes is allocated to the index component issues according to the respective new weights. For this purpose, the individual c_{it} adjustment factors are set to 1.
- The following applies for capital increases that are announced before the review effective date, but effective date for registration of new shares is after review implementation date: to account for the price adjustment, the change in share capital will be adjusted via the correction factor c_{it} at ex-date of the capital increase; at Index review, c_{it} is set to 1. The q_{it} will be adjusted at the next following regular index review.
- A chaining factor is calculated to avoid a gap in the respective index.

Chaining is carried out in three steps:

a) Calculation of the index value on the chaining date according to the old weighting scheme

The following applies accordingly:

$$\text{Index}_t = K_T \cdot \frac{\sum_{i=1}^n p_{it} \cdot ff_{iT} \cdot q_{iT} \cdot c_{it}}{\sum_{i=1}^n p_{i0} \cdot q_{i0}} \cdot \text{Base}$$

This value corresponds to the closing index published on the date of chaining and is used with two decimal places (as published) for all subsequent calculations.

b) Computation of an interim value

The interim value is computed using the number of shares valid on the chaining date ($q_{i,T+1}$) and the current free float factors ($ff_{i,T+1}$). The c_{it} adjustment factors are set to 1.

The following applies accordingly:

$$\text{Interim value} = \frac{\sum_{i=1}^n p_{it} \cdot ff_{i,T+1} \cdot q_{i,T+1}}{\sum_{i=1}^n p_{i0} \cdot q_{i0}} \cdot \text{Base}$$

The interim value is used as an exact figure for subsequent calculations.

c) Calculation of the new chaining factor

The following applies accordingly:

$$K_{T+1} = \frac{\text{Index}_t}{\text{Interim value}}$$

After chaining, the index is computed on the basis of the new chaining factor (K_{T+1}).

After calculation of the chaining factor, capital changes and dividend payments due on the date of chaining are considered via the c_{it} factor.

The F_i weighting factors of the index formula based on relative weights are calculated as follows:

$$F_i = K_{T+1} \cdot \frac{ff_{i,T+1} \cdot q_{i,T+1} \cdot c_{it}}{\sum_{i=1}^n q_{i0}} \cdot 100$$

7.2.2 Unscheduled Chaining

If the composition of the index is extraordinarily adjusted as described in section 5, an unscheduled chaining takes place. The chaining takes place as described in section 7.2.1, but without an adjustment of the parameters: Number of shares, free float, and correction factors (c_{it}). Newly included companies are considered using the current parameters from Prime All Share. The factors from CDAX® are adopted in the case of an unscheduled segment change from General Standard to Prime Standard. The interim value is calculated on the basis of the companies included in the new index portfolio.

$$\text{Interim value} = \frac{\sum_{i=1}^n p_{it} \cdot ff_{iT} \cdot q_{iT} \cdot c_{it}}{\sum_{i=1}^n p_{i0} \cdot q_{i0}} \cdot \text{Base}$$

With the new chaining factor to result as:

$$K_{T+1} = \frac{\text{Index}_t}{\text{Interim value}}$$

7.2.3 Adjustment during Unscheduled Chaining

Distributions will be adjusted by unscheduled chaining as described in section 8.1.3. Calculation of the interim value is based on the adjusted price and correction factors:

$$\text{Interim value} = \frac{\sum_{i=1}^n p_{it} \cdot ff_{iT} \cdot q_{iT} \cdot c_{it}}{\sum_{i=1}^n p_{i0} \cdot q_{i0}} \cdot \text{Base}$$

In this case, the adjusted price and the newly calculated c_{it} correction factor are applied for the distributing company i .

With the new chaining factor to result as:

$$K_{T+1} = \frac{\text{Index}_t}{\text{Interim value}}$$

7.3 Chaining for Market Cap-Weighted Indices

For indices that are not weighted according to Free Float Market Capitalization but rather on the basis of pure market capitalization, the chaining takes place as outlined in section 7.2.1, but with the following difference:

$$ff_{iT} = 1$$

7.4 Chaining for Equally Weighted Indices

For chaining in equally weighted indices, such as the Scale All Share Index, the weighting factor $q_{i,T+1}$ of every company will be adjusted during each scheduled and unscheduled chaining in order to ensure that every company has the same weighting in the index.

The following applies accordingly:

$$q_{i,t+1} = \frac{1}{p_{it} \cdot n} \cdot c$$

Where:

t = Time of last trading on the day of scheduled or unscheduled chaining

n = Number of shares in index

p_{it} = Price of company i at time t

q_{it+1} = Weighting factor of company i at time $t+1$

c = Scaling factor $(1\,000\,000 \cdot \sum_{i=1}^n p_{it})$

Weighting factors are rounded to the nearest integer.

7.5 Capping

For some indices, the maximum index weighting that a company can adopt is limited. This maximum index weighting is known as the capping limit and is defined for each specific index. That means that in these cases, the total Free Float Market Capitalization of a company is used to calculate the index weight. The following formula is used to calculate the Free Float Market Capitalization based on sections 2.4 and 6.1.1:

$$FF\ MCap = p_{it} \cdot ff_{iT} \cdot q_{iT}$$

Where:

- t = Last trading time on the day before the quarterly underlying data announcement date (T-6) of the scheduled chaining (or the day before the chaining in case of unscheduled chaining)
- T = at close of trading six trading days before the chaining day, e.g., T = Thursday before the 2nd Friday

A reduction of this parameter is conducted during the review process if the index weighting of the company exceeds the capping limit specified in the index, by reducing the number of shares (q_{iT}) of a company.

The procedure used, called capping, is described below and is performed for each review process:

Initially, the index weightings are calculated with the entire Free Float Market Capitalization. In a second step, it is checked whether the capping limit has been exceeded. In this case, the number of shares of the affected company is reduced until the weighting is below the capping limit. The implied reduction of the overall index capitalization (sum of the Free Float Market Capitalization of all companies in the index) may result in another company exceeding the capping limit. Capping is an iterative process which is performed until no company exceeds the capping limit.

If the capped portion of a company rises above 10 percent in the course of a quarter, it is lowered back to the capping limit only during the next quarterly index review, where applicable.

8 Adjustments – Corporate Actions

The total return indices are adjusted for exogenous influences (e.g., price-relevant capital changes) by means of certain correction factors, assuming a reinvestment according to the “opération blanche”.

The indices are simultaneously adjusted for systematic price changes using ex-ante calculations of the correction factor. The prerequisite for this is to calculate the correction factor on an ex-ante basis.

Consequently, the first “ex” price can be adequately included for index calculation purposes. The ex-ante incorporation of adjustments presupposes a general acceptance of the computation formula as well as a general availability of the parameters used.

The calculated adjustment factor and a synthetic price accordingly adjusted for this factor are used in the index from the ex-date of a share as long as no “ex” price is available.

8.1 Distributions

8.1.1 Cash Dividends and Other Distributions

Cash dividends and bonus distributions are only corrected in performance and net return indices. Special distributions are taken account of in all performance, net return, and price indices.

Within the framework of index calculation, the share price is thus modified by the amount of the respective cash distribution, as defined of Section 2.1.

The cash dividend and other distributions are determined according to publicly available data such as issuers, financial regulators’ announcements.

The c_{it} adjustment factors for cash dividends, bonuses and special distributions are calculated as follows:

$$c_{it} = \frac{p_{i,t-1}}{p_{i,t-1} - D_{i,t}(1-\tau)} \cdot c_{it-1}$$

Where:

$p_{i,t-1}$ = Closing price of the relevant share on the day before the ex-dividend date

$D_{i,t}$ = Cash dividend, bonus, or special distribution on day t

τ = withholding tax, only for net return indices, otherwise $\tau = 0$

The withholding tax used to calculate the net return indices can be found on www.stoxx.com.

8.1.2 Stock Dividends

The issue of shares instead of the distribution of cash to provide dividends is treated in the same way as bonus shares or nominal value changes and is accounted for in both performance and price indices. If the holder is granted the right to choose between cash dividends and stock dividends, it shall be assumed that cash dividends will be drawn.

8.1.3 Distributions > 10 Percent of Market Capitalization

If the absolute amount of the accumulated distributions (dividends, bonus and special distributions, spin-offs, or subscription rights on other share classes) between two regular chaining dates accounts for more than 10 percent of the market capitalization of the distributing company on the day before the first distribution, the part of the distribution exceeding the 10 percent will not be reinvested in a single stock but in the overall index portfolio by means of unscheduled chaining.

In such a case, the ci adjustment factor for the distribution amount on 10 percent of the distribution will be calculated according to the formulas described in sections 8.1.1 and 8.1.2. The remaining distribution amount will be implemented at the same time as the adjustment of the chaining factor as described in section 7.2.

Example 1 – Dividend distribution of 25 percent

Company A, which is included in the index with a current share price of €100 and current adjustment factor of 1, pays a special dividend of €25 to shareholders on the ex-dividend date t. An adjustment factor of 1.11111 will be calculated according to section 8.1.1 for the part of the distribution which accounts for 10 percent of the overall capital (€10). The remaining markdown of €15 will be adjusted by conducting an extraordinary chaining as described in section 7.2.2.

Example 2 – Dividend distribution of 5 percent on day t, spin-off of 10 percent on the next day

Company B, which is included in the index with a current share price of €10 and current adjustment factor of 2, pays a special dividend of €0.50 on the ex-dividend date t. The special dividend will be adjusted by the adjustment factor as described in section 8.1.1. The new adjustment factor is correspondingly calculated as 2.105263. On the next day company C will be spun-off from company B. Firstly, company C will be included in the index and removed on the next day with a closing price of €1 as described in section 8.4, resulting in a markdown of €1 or 10 percent based on the capitalization before the first distribution. The accumulated markdown is 15 percent of the market value. Up to and including 10 percent of the markdown - in this case €0.5 – will be adjusted by the ci factor in accordance with section 8.1.1. The remaining markdown of €0.5 will be adjusted conducting an extraordinary chaining as described in section 7.2.2.

8.2 Changes in Share Capital

8.2.1 Capital Increases

The c_{it} adjustment factors for capital increases (against cash contributions, or using company reserves) are determined as follows:

$$c_{it} = \frac{p_{i,t-1}}{p_{i,t-1} - BR_{i,t-1}} \cdot c_{it-1}$$

Where:

$$BR_{i,t-1} = \frac{p_{i,t-1} - p_B - DN}{BV + 1}$$

and:

$p_{i,t-1}$ = Closing price on the day before the ex-date

$BR_{i,t-1}$ = Theoretical value of subscription rights

p_B = Subscription price

BV = Subscription ratio

DN = Dividend disadvantage

For capital increases using company reserves: $p_B = 0$

The dividend disadvantage is equivalent to the last dividend paid or the proposed dividend published by financial data providers. For issues on which options are traded at Eurex, this procedure is coordinated with Eurex, taking account of the respective rights markdown to adjust the basis prices of the various equity options.

If the subscription price is not available or equal to or greater than the closing price on the day before the effective date, then no adjustment is made.

If the subscription price is available as a price range and not as a fixed price, c_{it} factor adjustment is performed only if both lower and upper range are in the money. The average value between lower and upper range will be used as a subscription price.

8.2.2 Capital Reductions

The following formula is used to calculate the c_{it} adjustment factor in the case of a simplified capital reduction:

$$c_{it} = \frac{1}{V_{it}} \cdot c_{it-1}$$

Where:

V_{it} = Reduction ratio of company i valid at time t

In the event of a capital reduction and subsequent capital increase against additional contributions, the introduction of a new class of shares is handled as follows:

The old classes are removed, and the new class is included with the corresponding computation of a chaining factor. In this context, two assumptions are made: firstly, that the last traded price could have been achieved, and secondly that the released capital will be invested in the new class on the subsequent day. The new class is included in the index based on the respective opening price on the first day of the new quotation.

8.3 Nominal Value Changes and Share Splits

In the case of nominal value changes (or share splits), it is assumed that the respective price changes occur in proportion to the related nominal value (or number of shares). The adjustment factor reflects this assumption accordingly:

$$C_{it} = \frac{N_{i,t-1}}{N_{i,t}} \cdot C_{it-1}$$

Where:

$N_{i,t-1}$ = Previous nominal value of share class i (or new number of shares)

$N_{i,t}$ = New nominal value of share class i (or previous number of shares)

8.4 Spin-offs

Where a company, A, spins off one of its divisions into new, independent companies, the adjustment is carried out as described below.

A theoretical markdown cannot be calculated on an ex-ante basis since there is no closing price for the shares of the new companies. The spun-off entities are additionally included in the index at a price of 0 on the ex-date to avoid any index tracking errors. For a spin-off affecting the DAX®, for instance, this implies that the index is calculated based on more than 40 issues for at least one day. After close of trading on their first trading day the spun-off companies are removed from the index. At the same time, the c_i factor of company A is adjusted as follows:

$$c_{i,t}^A = \left(1 + \sum_{j=B}^N \frac{c_{i,t-1}^j \cdot p_{i,t-1}^j}{c_{i,t-1}^A \cdot p_{i,t-1}^A \cdot BV_j} \right) \cdot c_{i,t-1}^A$$

Where:

$p_{i,t-1}^A$ = Closing price of "A" shares on t-1

$p_{i,t-1}^j$	=	Closing price of spun-off company j on t-1
BV_j	=	Subscription ratio of spun-off company j
t-1	=	First trading day of spun-off company j
t	=	point in time in which the spun-off companies are removed from the index

8.5 Subscription Rights on Equity

8.5.1 Subscription Rights on Other Share Classes

Where shareholders of a company (class A) are granted subscription rights to shares of another class (class B) of the same company, two different scenarios must be distinguished:

A The shares to which a subscription right exists are already listed

The c_{it} adjustment factor is computed analogously to a capital increase of class A shares:

$$c_{it} = \frac{p_{it-1}^A}{p_{it-1}^A - BR_{it-1}}$$

Where:

$$BR_{it-1} = \frac{p_{it-1}^B - p_B - DN}{BV + 1}$$

And:

BR_{it-1}	=	Theoretical value of subscription rights
p_{it-1}^A	=	Closing price of class A shares on the day before the ex-date
p_{it-1}^B	=	Closing price of class B shares on the day before the ex-date
p_B	=	Subscription price
BV	=	Subscription ratio
DN	=	Dividend disadvantage of class B

B New issue of shares to which a subscription right exists

In this case, the exact theoretical value of subscription rights cannot be calculated on an ex-ante basis since there is no closing price for the new class. Therefore, the index is corrected as follows:

The expected price for the new shares is determined on the basis of the price difference between ordinary and preference shares of comparable companies (Discretionary Rule, see Section 1.3). This price is used in line with the procedure described above to compute the respective subscription right.

8.6 Subscription Rights on Fixed-Income Instruments and Instruments with Embedded Options

A valuation of the respective fixed-income instrument on the basis of the net present value method is necessary to determine the value of subscription rights. Future revenues are estimated without deducting capital gains tax and are first discounted on the date on which payment of the subscription price becomes due.

No adjustment is required if subscription rights are not traded (in the event that terms are issued in line with prevailing market conditions).

8.6.1 Subscription Rights on Profit-Participation Certificates

The c_{it} adjustment factor for subscription rights related to profit-participation certificates is calculated in the following way:

$$c_{it} = \frac{p_{i,t-1}}{p_{i,t-1} - BR_{i,t-1}} \cdot c_{it-1}$$

Where:

$p_{i,t-1}$ = Closing price of share i on the day before the ex-date

$BR_{i,t-1}$ = Theoretical value of subscription rights

Discounting is carried out using the actual/actual method.

With the purchase price being considered, the capital value at the time of payment is obtained according to the following equation:

$$KW_{t-1} = -P + K_1 \cdot q^{\left(\frac{-t}{365}\right)} + K_2 \cdot q^{\left(\frac{-t}{365}\right)} \cdot q^{-1} + \dots + (T + K_n) \cdot q^{\left(\frac{-t}{365}\right)} \cdot q^{-n+1}$$

Where:

KW_{t-1} = Capital value of the participation certificate on the day before the ex-date

q = $1+r$

r = Discount rate

t = Period from the date of issue to the first interest due date (in days)

P = Purchase price of the profit-participation certificate

K_i = Coupon payment in year i

T = Redemption

n = Term of the participation certificate (in years)

The discount rate applied here is equivalent to the yield of a zero bond with the same maturity, plus a risk add-on determined on the basis of comparable instruments. The capital value is rounded to two decimal places.

Assuming that profit-participation certificates are offered at a ratio of z:1, the value of subscription rights ($BR_{i,t-1}$) per share is thus

$$BR_{i,t-1} = \frac{KW_{t-1}}{z}$$

8.6.2 Subscription Rights on Bonds

The procedure is in line with that described in section 8.6.1, with the respective bond being valued by means of the net present value method²⁵. The subscription ratio is subsequently considered, and the correction factor established.

8.6.3 Subscription Rights on Instruments with Embedded Options

The procedure for subscription rights that involve instruments vesting an option right also facilitates the computation of the various correction factors on an ex-ante basis (Discretionary Rule, see Section 1.3).

8.6.4 Subscription Rights on Profit-Participation Certificates with Warrants

The C_{it} adjustment factor for subscription rights on profit-participation certificates with warrants is determined according to the following:

- 1) Valuation of the fixed-interest component of the profit-participation certificates with warrants
- 2) Valuation of warrants
- 3) Calculation of the value of subscription rights
- 4) Computation of the adjustment factor

on 1) Valuation of the fixed-interest component of profit-participation certificates with warrants

The valuation of the fixed-interest component of profit-participation certificates with warrants (KW_{t-1}) corresponds to the valuation of profit-participation certificates set out above.

on 2) Valuation of warrants

Warrants are valued using the binomial options pricing model, which permits dividend payments to be considered in the computation. The dividend used is the average of the last three dividends paid. Where a dividend has already been announced, then the aggregate of this value and the two preceding dividend payments is taken for averaging purposes. The volatility used is the annualised 250-day volatility of the underlying instrument. The interest rate applied here is equivalent to the

²⁵ "Capital budgeting technique used to determine the benefits offered by investment projects. The net present value is calculated by discounting all inflows and outflows at the reference date." [Gabler Wirtschaftslexikon; as at May 2015]

yield of a zero bond with a maturity corresponding to the option's lifetime. The option is valued at the time of issue of the respective profit-participation certificates with warrants, irrespective of its exercise period. The option value is rounded to two decimal places.

The dilution effect is considered as follows:

$$O = \frac{O_B \cdot N}{N + n}$$

Where:

O = Option value

O_B = Value of the option right without the dilution effect

N = Number of shares prior to the exercise of option rights

n = Potential number of shares ensuing from the exercise of option rights

on 3) Calculation of the value of subscription rights

The capital value of the profit-participation certificate and the option value are aggregated to form the total value of a profit-participation certificate with warrants.

Assuming that profit-participation certificates with warrants are offered at a ratio of z:1, the value of subscription rights (BR_{i,t-1}) per share is

$$BR_{it} = \frac{KW_{t-1} + O}{z}$$

on 4) Computation of the adjustment factor

The adjustment factor is computed as follows:

$$C_{it} = \frac{p_{i,t-1}}{p_{i,t-1} - BR_{i,t-1}} \cdot C_{it-1}$$

8.6.5 Subscription Rights on Bonds with Warrants or Convertible Bonds

Computation is in line with the procedure described in section 8.6.4 above. The fixed-interest and option components are valued separately and then aggregated. The dilution effect and subscription ratio are subsequently considered, and the adjustment factor is determined.

9 Limitations

This section applies in the event of Limitations that occur due to:

- insufficient rules, meaning the absence of a methodology rule, provision or procedure which leads to a failure when determining the respective index value or which leads to an index value that does not properly reflect the concept / nature of the index, e.g.:
 - performance of the index can no longer be physically replicated;
 - insufficiently available index constituents to fulfil the requirements of the Index Methodology;
 - unclear rules, meaning a situation in which the rules leave multiple possible interpretations on how a certain rule shall be applied to a specific situation;
 - data insufficiency, meaning a scenario in which the calculation of an index is no longer possible due to insufficient data quantity or quality;
 - failure to produce index values as intended;
- market disruption which results in the performance of the index being unable to be tracked,
- events with a market impact that by their nature could reasonably not be foreseen, or events whose impact on an index or the economic reality the index intends to represent, cannot be determined in advance. Events covered in this section include, but are not limited to, events of natural, social, political, economic nature that may negatively impact regional or global societies or economies. Examples may be, but are not limited to, the following: (i) change to currency convertibility or restriction on capital flows announced by a country; (ii) market disruption, e.g., an event that materially negatively influences the aggregated liquidity, capitalization, or tradability of an entire market; (iii) exchange closure, (iv) government intervention, (v) pandemic, (vi) natural catastrophe.

If a Limitation has occurred, the IGC shall decide if and how the Limitation shall be rectified (Discretionary Rule, see Section 1.3). Any such rectification may comprise deviations from the index methodology which may apply as long as the Limitation persists (Discretionary Rule, see Section 1.3).

In this context, STOXX may also decide to cancel an index review.

If a Limitation that could justify the cancellation of an index review occurs two or fewer dissemination days before the scheduled review implementation day, the review will be performed as planned, if reasonably possible. This aims to avoid last minute changes and not undermine the trading activity that may have already been performed.

If a review is cancelled, STOXX aims to perform it at the next scheduled review of the index or at the next quarterly review date (3rd Friday of March, June, September, and December), whichever comes first and subject to the then prevailing market conditions.

If a decision to deviate from the index methodology is taken, it will be communicated as soon as possible in form of an Announcement or Press Release. STOXX Ltd. will refrain from the issuance of a notification if it reaches the view that the issuance of a notification is not in line with applicable laws and may decide to issue such notification at a later point in time when such reasons have lapsed (Discretionary Rule, see Section 1.3). By reason of force majeure or other events beyond the control of STOXX Ltd. it might become impossible for STOXX Ltd. to issue a notification in due time or by the means set out herein. In such cases STOXX Ltd. may exceptionally issue the notification either subsequently immediately following such event or in any case by other means.

Any measures will be implemented two dissemination days later and will enter into effect the next dissemination day after implementation unless a different effective date is specified in the notification.

10 Methodology Review

The purpose of the methodology review is to maintain integrity of the index, i.e., that the index methodology remains executable and results in an accurate and reliable representation of the market / economic realities the index seeks to measure.

10.1 Frequency of Review

In order to ensure the index integrity is maintained, the methodology is reviewed annually and ad hoc if a Limitation has occurred. If a Limitation cannot be addressed with by a methodology review, this may give rise to an index cessation or index transition. STOXX Ltd. shall not be liable for any losses arising from any decisions taken as part of a methodology review.

10.2 Review Procedure

10.2.1 Initiation of Methodology Review

The IMC proposes an annual methodology review schedule for approval by the IGC (Discretionary Rule, see Section 1.3).

The IMC is in charge of initiating ad hoc methodology reviews in case of a Limitation or based on recommendations to initiate a Methodology Review by other STOXX. Committee (Discretionary Rule, see Section 1.3).

10.2.2 Decision and Escalation

The following STOXX. Committees are responsible for making the decisions on amendments to an index methodology:

The IMC decides on changes to the index methodology, unless

- a) a material change to the index methodology is proposed (see Section 10.3 below),
- b) the change is triggered by an Unclear Rule or Insufficient Rule (as part of a Limitation, Section 9), or
- c) it relates to a request for a market consultation

- d) financial products relating to the index have a notional value/notional amount of more than EUR 100 mn.

If any of the conditions a) to d) above is met, the decision is taken by IGC.

10.3 Material Changes with Consultation

As described in the STOXX Changes to Methodology Policy and in STOXX Consultation Policy (publicly available on STOXX website), prior to proposed material changes to the index methodology, a consultation will be performed.

A change to an index methodology shall be considered material in the event of:

- a) a substantial change in the index objective or market/economic reality the index aims to represent (e.g. market leader components vs. mid cap companies), or
- b) a substantial change of the index methodology in aspects such as, but not limited to, the ones listed below and that would result in altering the overall concept or the nature of the index:
 - i. calculation methods or formulas with a substantial impact on the index performance, or
 - ii. rules regarding the determination of index constituents by application of the index methodology, or
 - iii. rules regarding the determination of the weights of index constituents by application of the index methodology,
 - iv. rules regarding the treatment of corporate actions.

On the contrary, index methodology updates resulting from the application of existing methodology principles or minor clarifications of existing rules or corrections without altering the overall concept or the nature of the index are generally considered non-material.

The IMC determines whether an amendment is material as defined above. In case such determination is not possible, the proposed amendment shall be treated as material.

(Discretionary Rule, see Section 1.3).

In case of Changes to Methodology as described in STOXX Changes to Methodology Policy a STOXX consults with reasonably affected stakeholders ("Stakeholders") prior to take decision.

Stakeholders mean (a) persons or entities who have an index license with STOXX regarding a benchmark administered by STOXX (Subscriber) and/or as far as STOXX is reasonable aware (b) persons or entities and/or third parties who own contracts or financial instruments that reference a benchmark administered by STOXX (Investors)

Considering the Principle of Proportionality, STOXX informs affected Stakeholders as follows:

- either via public consultation open to the entire market and performed via STOXX website;
- or, when the relevant Stakeholders are known, on a restricted basis directly on the Stakeholders e-mail address.

STOXX shall inform in writing the Stakeholders on:

- the key elements of the proposed relevant changes
- the rationale for any proposed relevant changes
- the specific questions to be answered
- the deadline for receiving feedback
- the timeline of implementation of the Relevant Changes
- contact details where to provide feedback
- relevant definitions

The consultation shall enable Stakeholders to submit comments.

The standard consultation period shall be 1 month with the option to shorten or extend this period.

The IGC may decide to shorten the 1-month period in the following cases:

- in extreme or exceptional market conditions or analogous extraordinary situations
- in urgent cases, such as a situation in which the Index cannot be replicated anymore;
- in situations where there is no known Stakeholders impact or only a limited number of Stakeholders;
- in order to align the effective date of a proposed change with Index Maintenance; e.g. an Equity/Bond Index Rebalancing, Index Review, and Corporate Action Adjustment, or
- any other similar cases applying the principle of proportionality.

The IGCs will consider the feedback received and decide whether the relevant changes shall become effective.

The IGC is not bound by any feedback received. Moreover, if the received feedback is ambiguous, or if no Stakeholders participated, the IGC may decide to conduct another consultation, which again will not be binding.

If the IGC decides that relevant changes shall become effective, STOXX will communicate a timeline on the implementation of the relevant changes, if not already communicated in the consultation material.

STOXX will after the consultation make available the Stakeholders feedback received in the consultation and STOXX's summary response to those comments, except where confidentiality has been requested by the respective Stakeholders.

The decision will be communicated as soon as possible in the form of an Announcement or Press Release.

STOXX Ltd. will refrain from issuance of a notification if it reaches the view that the issuance of a notification is not in line with applicable laws and may decide to issue such notification at a later point in time when such reasons have lapsed.

By reason of force majeure or other events beyond the control of STOXX Ltd. it might become impossible for STOXX Ltd. to issue a notification in due time or by the means set out herein. In such cases STOXX Ltd. may exceptionally issue the notification either subsequently immediately following such event or in any case by other means.

At the end of each consultation STOXX Ltd. will make available the feedback received from Stakeholders in the consultation together with a summary of its response to that feedback, except where confidentiality has been requested by the respective Stakeholders. (Discretionary Rule, see Section 1.3).

10.4 Non-Material Changes without Consultation

Non-material changes of the index methodology, including a description of the impact and the rationale, will be announced via Announcement or Press Release, effective immediately following publication, unless otherwise specified in the notification (Discretionary Rule, see Section 1.3). STOXX Ltd. will refrain from the issuance of a notification if it reaches the view that the issuance of a notification is not in line with applicable laws and may decide to issue such notification at a later point in time when such reasons have lapsed (Discretionary Rule, see Section 1.3). By reason of force majeure or other events beyond the control of STOXX Ltd. it might become impossible for STOXX Ltd. to issue a notification in due time or by the means set out herein. In such cases STOXX Ltd. may exceptionally issue the notification either subsequently immediately following such event or in any case by other means.

10.5 Publication of the methodology change

The effective date for benchmark methodology changes is aligned, where feasible, with the periodic benchmark reviews dates when the benchmark composition is changed, and a rebalancing is triggered to avoid extra ordinary impact for clients. Material methodology changes should generally be publicly announced 3 months prior to implementation. IGC may decide to shorten the notice period:

- a. In exceptional or urgent cases such as extreme or exceptional market conditions or analogous extraordinary situations
- b. in situations where there is no Stakeholder impact and where it has been agreed that the notice period has to be shortened but immediate communication is not possible. A case that requires urgent action is for example a situation in which the investor's ability to replicate the index benchmark performance with his or her portfolio is no longer ensured. In such cases, changes or amendments to the published index methodology must be made on the same day the new rule or change is implemented.
- c. to align with the period benchmark review dates and the rebalancing of the benchmarks.
- d. In case of any proposed material change in its methodology, STOXX shall share its view on the key elements of the methodology that will be impacted by a proposed material change. Furthermore, STOXX Ltd. shall include an assessment as to whether the representativeness of the benchmark and its appropriateness for its intended use are put at risk in case the proposed material change is not put in place. In case of any changes or amendments to the present Index Guide, Operations and Product will work together to ensure both the public and subscribers are provided with detailed information about the nature and rationale of the change as well as the implications and terms for the new methodology to enter into force.

11 Appendix

11.1 Historical Data

Index histories exist for all indices at least from the respective baseline date:

The DAX[®] price index continues the Börsen-Zeitung index, which historically extends back to October 1959. However, historical index levels of the DAX[®] performance index are only available since its baseline date in December 1987.

For the CDAX[®] price index there is a timeline which extends back to 1970. However, the history of the CDAX[®] performance index is only available since its baseline date in December 1987.

All histories up to and including 18 June 1999 are based on the prices of the floor trading on the FWB® Frankfurt Stock Exchange. Xetra® and Börse Frankfurt prices have been used to calculate the indices since 21 June 1999.

11.2 Calendar of Publications

Event	Point in Time
Publication Equity Index Rankings (monthly)	3 rd trading day of the month after 10 p.m. CET
Review Publication Date Publication additions/ deletions	3 rd trading day in March, June, September, December after 10 p.m. CET
Publication DAX 50 ESG/ Scale 30 Index Rankings	4 th trading day of the month after 10 p.m. CET
Publication DAX 50 ESG/ Scale 30 Index additions/ deletions	4 th trading day in March, June, September, December after 10 p.m. CET
Quarterly underlying data announcement date	2 nd Friday (i.e. 5 trading days before the chaining date) in March, June, September, December
Publication Business Forecast	On the Quarterly underlying data announcement date; Business Forecast is republished on Wednesday before the 3 rd Friday (i.e. 2 trading days before the chaining date) after 10 p.m. CET
Chaining date, also referred to as Review Implementation Date	3 rd Friday in March, June, September, December
Cut-off date for creation of ranking list	Last trading day of the month (at 5:30 p.m. CET) for which the ranking list will be created, e.g. May 31 st for May ranking list
Meeting Advisory Board for Equity Indices	not later than the 6 th trading day in March and September
Annual sector classification review	annually in August with publication in September

11.3 Sector classification

Super sector	Sector	Subsector	Classic/ Tech ²⁶	Description
Consumer Goods	Automobile	Auto Parts & Equipment	Classic	Producers of parts and accessories for motor vehicles and motorcycles (including tyres and batteries)
	Automobile	Automobile Manufacturers	Classic	Companies primarily active in the production of passenger vehicles, small lorries, and motorcycles
	Consumer	Clothing & Footwear	Classic	Companies producing mainly textile goods and shoes, including related cleaning services
	Consumer	Consumer Electronics	Classic	Companies producing mainly consumer electronics goods (such as TV sets, VCRs/camcorders HiFi equipment, etc.) (This excludes producers focusing on computers and telecommunications equipment.)
	Consumer	Home Construction & Furnishings	Classic	Producers of prefabricated homes, DIY products and furnishings (such as furniture or lighting)
	Consumer	Household Appliances & Housewares	Classic	Producers of household and garden products (such as cutlery, dishes, or cleaning products), or of household appliances ("white goods")
	Consumer	Leisure Goods & Services	Classic	Producers of leisure goods (such as sports equipment, toys, bicycles), as well as restaurant, hotel, or casino operators
	Consumer	Personal Products	Classic	Producers of cosmetics and personal care products
	Food & Beverages	Beverages	Classic	Producers of beverages of all kinds
	Food & Beverages	Food	Classic	Producers of food and tobacco products of all kinds
FIRE ²⁷	Banks	Credit Banks	Classic	Commercial and universal banks which do not fall into the categories of Mortgage Banks or Financial Services Providers
	Banks	Mortgage Banks	Classic	Specialist banks exclusively (or predominantly) extending long-term loans against liens on real property, or communal loans
	Financial Services	Diversified Financial	Classic	Financial services providers that do not have universal bank status, but who distribute a range of financial services
	Financial Services	Private Equity & Venture Capital	Classic	Holding companies investing in diversified business areas
	Financial Services	Real Estate	Classic	Companies investing in property/real estate (directly or indirectly)
	Financial Services	Securities Brokers	Classic	Companies active in the securities business, such as brokers, online banks, exchanges, etc.
	Insurance	Insurance	Classic	Companies mainly underwriting policies for life, accident, health, or home contents cover
	Insurance	Re-Insurance	Classic	Companies mainly underwriting reinsurance cover
Basic Materials	Basic Resources	Forest & Paper Products	Classic	Producers of wood or basic wood products, and paper producers
	Basic Resources	Mining	Classic	Companies extracting commodities such as iron ore, minerals, aluminium, coal, diamonds, or similar substances
	Basic Resources	Oil & Gas	Classic	Companies drilling for oil and gas, which do not fall under the Oil & Gas Distribution category
	Basic Resources	Steel & Other Metals	Classic	Producers of steel or related in-process products; producers of iron, non-iron metals, or precious metals
	Chemicals	Chemicals, Commodity	Classic	Producers of simple, standardised chemical products
	Chemicals	Chemicals, Specialty	Classic	Producers of non-standard, specialty chemical products

²⁶ The classification of Subsectors into Classic and Tech indicates whether a company is listed additionally to the TecDAX ranking list or only to the DAX/MDAX/ SDAX ranking list.

²⁷ FIRE =Finance, Insurance and Real Estate

Guide to the
DAX Equity Indices

	Chemicals	Industrial Gases	Classic	Producers of industrial gases
Industrials	Construction	Building Materials	Classic	Producers of basic construction materials, such as cement, flooring, doors, windows, etc.
	Construction	Construction & Engineering	Classic	Companies active in the development and construction of buildings and infrastructure projects (e.g. roads) (excluding prefabricated homes)
	Industrial	Advanced Industrial Equipment	Tech	Companies using sophisticated technology or providing engineering for the production of high-tech industrial goods (for example, producers of lasers, robots, or optical storage media)
	Industrial	Containers & Packaging	Classic	Companies specialising in all kinds of packaging
	Industrial	Heavy Machinery	Classic	Producers of large but mobile machinery, such as heavy goods vehicles, ships, agricultural machines, etc.
	Industrial	Industrial Machinery	Classic	Producers of industrial machinery or related components, such as machine tools, compressors, printing machines, etc.
	Industrial	Industrial, Diversified	Classic	Companies with activities across various industrial sectors (including holding companies investing in different sectors)
	Industrial	Renewable Energies	Tech	Companies developing equipment for alternative and/or renewable energy generation, such as solar technology or wind-powered turbines
	Industrial	Industrial Products & Services	Classic	Producers/providers of other industrial products or services (e.g. market research, human resources, industrial wholesalers, waste disposal)
	Transportation & Logistics	Airlines	Classic	Aviation companies mainly carrying passengers
	Transportation & Logistics	Logistics	Classic	Providers of industrial transport services (land transport/ aviation cargo/ freight shipping)
	Transportation & Logistics	Transportation Services	Classic	Providers of infrastructural or other specialised transport services (including airport operators, road or rail networks, tour operators, etc.)
Consumer Services	Media	Advertising	Classic	Companies offering advertising, marketing and/or public relations services
	Media	Broadcasting	Classic	Providers of cable and satellite transmission services, and radio/television broadcasters
	Media	Movies & Entertainment	Classic	Companies producing (or trading in) entertainment products and services, including producers, distributors and broadcasters of feature films and television shows, music producers and distributors, theatre operators and sports teams
Consumer Services	Media	Publishing & Printing	Classic	Publishers of newspapers, magazines and books, and providers of printed or electronic information; including providers of related services (including educational institutions)
	Retail	Retail, Catalogue	Classic	Retailers selling mainly by mail order, which are not categorised under Retail, Internet
	Retail	Retail, Food & Drug	Classic	Owners/operators of food stores, pharmacies, and drugstores (wholesale and retail)
	Retail	Retail, Internet	Classic	Retailers selling their goods or services mainly over the Internet
	Retail	Retail, Multiline	Classic	Retail companies with a broad product range (department stores)
	Retail	Retail, Specialty	Classic	Retail companies with a very specific product range (such as fashion, electronics, etc.)
Pharma & Healthcare	Pharma & Healthcare	Pharmaceuticals	Classic	Companies researching, developing, or producing pharmaceuticals (including veterinary products)
	Pharma & Healthcare	Healthcare	Classic	Owners/operators of healthcare institutions (such as hospitals or nursing homes), providers of healthcare services (e.g. dialysis) and providers of medical material (such as syringes, swabs, etc.)
	Pharma & Healthcare	Biotechnology	Tech	Companies mainly active in developing, producing, marketing, or licensing products based on biotechnological research
	Pharma & Healthcare	Medical Technology	Tech	Producers of technological products and devices used in healthcare, such as pacemakers, dialysis equipment or UV therapy systems

Information Technology	Software	Internet	Tech	Companies providing and developing Internet infrastructure (Internet access, portals, software, etc.)
	Software	IT-Services	Tech	Companies active in IT consulting, IT operations, systems integration, etc.
	Software	Software	Tech	Companies focused on the development of standard or specialised software solutions
	Technology	Communications Technology	Tech	Companies developing telecommunications technology and/or products (such as user devices or network components)
	Technology	Electronic Components & Hardware	Tech	Producers of electronic components (printed circuit boards, integrated circuits, smart cards) or computer hardware (PCs, monitors, etc.)
	Technology	Semiconductors	Tech	Producers and developers of semiconductors or similar products
Tele-communication	Telecommunication	Fixed-Line Telecommunication	Tech	Telecommunications carriers mainly providing fixed-line local and long-distance services
	Telecommunication	Wireless Telecommunication	Tech	Telecommunications carriers mainly providing wireless/mobile services
	Telecommunication	Telecommunication Services	Tech	Providers of ancillary or specialised telecommunications services
Utilities	Utilities	Electricity	Classic	Companies generating and/or distributing electricity (including operators of power stations)
	Utilities	Water	Classic	Providers of water to end-users (this segment includes operators of purification plants)
	Utilities	Oil & Gas (Distribution)	Classic	Utilities mainly providing energy in the form of oil and gas
	Utilities	Multi-Utilities	Classic	Companies active across various energy sectors
