Update Screen Thematic Indices

Dear Customer,

STOXX Ltd., the operator of the ISS STOXX index business and a global provider of innovative and tradable index concepts, today announces an update to the screening applied within the parent universes of selected STOXX Thematic Indices. The update reflects the application of the Controversial Weapons exclusion screen as part of the index methodology. All changes will be implemented as part of the upcoming index review for the respective indices.

The following STOXX Thematic Indices are impacted at the level of their respective parent universes:

- STOXX Europe Targeted Defence
- STOXX Europe Infrastructure Builders
- STOXX Global Space Satellites & Drones
- STOXX Global Quantum Computing

As defined in the STOXX Thematic Indices methodology, companies identified as "Red" with involvement in controversial weapons are excluded. The controversial weapons categories considered are:

- Anti-personnel mines
- Biological weapons
- Chemical weapons
- Cluster munitions

The screening approach identifies all companies within a corporate structure that have control over the relevant business activities. Only companies classified as Red are excluded.

ISIN	Company Name
