

EURO STOXX INTERNATIONAL EXPOSURE

Index description

The STOXX International Exposure indices provide investors exposure to companies that generate a substantial portion of their revenue outside their respective home region. Revenue exposures are derived based on regional revenue breakdowns as reported by companies as well as based on estimations that are, in turn, based on an estimator developed by STOXX.

Key facts

» exposure to markets outside the region the companies are listed in

» rules based and transparent

» selection of companies based on broad and representative yet liquid EURO STOXX

Performance and annual returns⁴

Methodology

From the EURO STOXX, companies that generate at least 50% of revenue outside of their region are selected. Based on most recent annual reports, revenue share is updated on an annual basis.

To decrease index turnover, selection is subject to a buffer on component level: companies that were selected into the index at a given point in time leave the index only if their exposure falls below 40%.

All companies on the selection list build up the index composition.

BACKTESTED PERFORMANCE

This document contains index performance data based on backtesting, i.e. calculations of how the index might have performed prior to launch if it had existed using the same index methodology and based on historical constituents. Backtested performance information is purely hypothetical and is provided in this document solely for information purposes. Backtested performance does not represent actual performance and should not be interpreted as an indication of actual performance.

CUSTOMIZATION

The index can be used as a basis for the definition of STOXX® Customized Indices, which can be tailored to specific client or mandate needs. STOXX offers customization in almost unlimited forms for example in terms of component selection, weighting schemes and personalized calculation methodologies.

³ Net dividend yield is calculated as net return index return minus price index return
